REST services to store and retrieve BLOB from ATP

Assets that contain oic project that can be used as template for the storing and retrieving attachments from Oracle ATP Database

Using the Oracle Autonomous Transaction Processing Adapter to store and retrieve binary objects

OIC project Postman collection implementing the API request signing required by the Oracle Cloud Infrastructure API, as well as capturing some sample OCI requests.

CICD - OIC3 quickstart Example

This simple template project demonstrates how you can send multipart mixed content payload through Oracle Integration to an Autonomous Database and then later retrieve the attachment from DB. All this can be invoked/consumed from an external application through REST API.

Review Date: 15.04.2025

When to use these assets?

These assets should be used whenever needed to design and implement REST processing of multipart/mixed payloads and retrieving the binary large objects from OIC Staging database(ATP).

How to use these asset?

The information is generic in nature and not specified for a particular customer.

- Project solution and installation is described in the ./filex/OIC-Project-REST-write&retrieveBLOB-ATPadapter.pdf
- Project solution logical view for the OCI Integration Cloud Architecture used is located in ./files/img
- Postman collection and curl commands to test the services are located in ./filex/oic-clients
- OIC project archive .car file is located in ./files/oic-roject
- Sql commands to create table necessary for the service run and sample payloads and content are located in ./files/oic-prereqs
