

ORACLE

Oracle Autonomous Database Data Studio

Overview

Stéphane Duprat

Autonomous AI Lakehouse black belt

April 2026

How the Autonomous Database Platform empowers analytics and AI

The opportunity

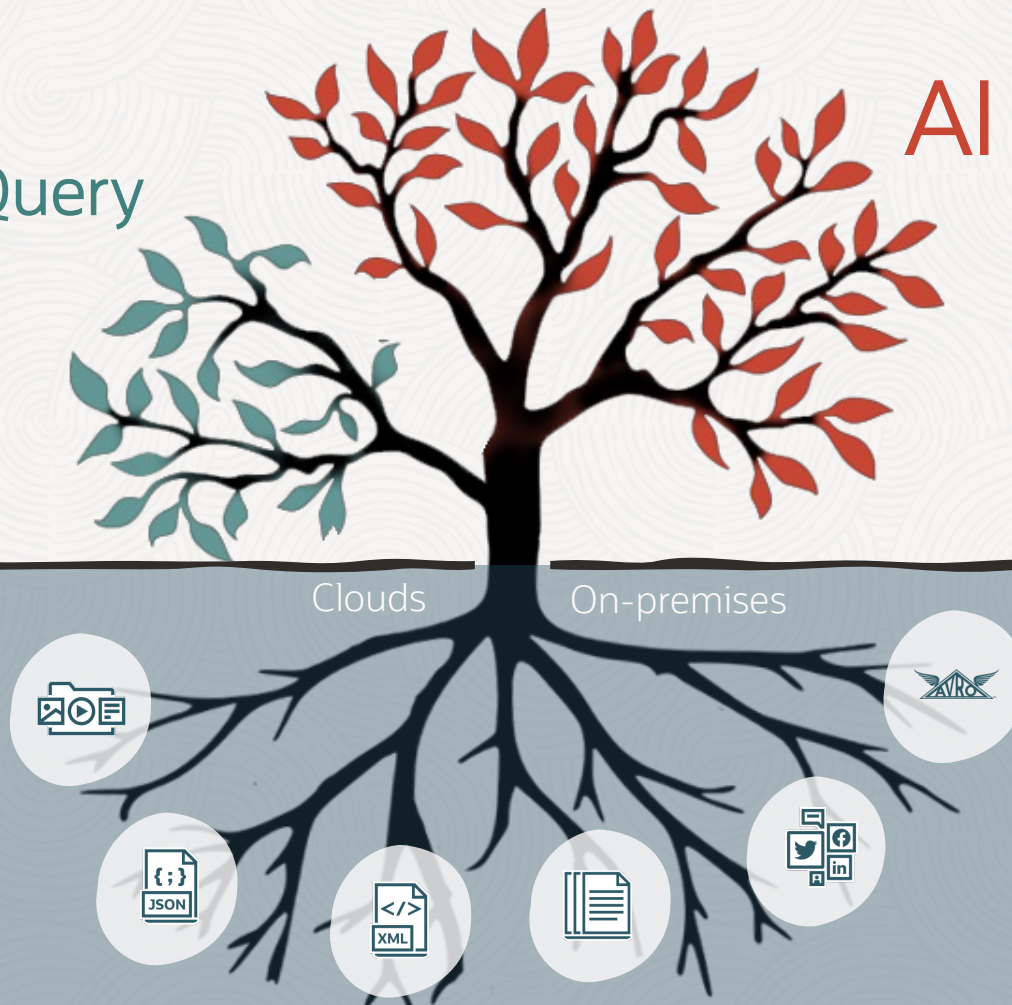

Any Workload

Query

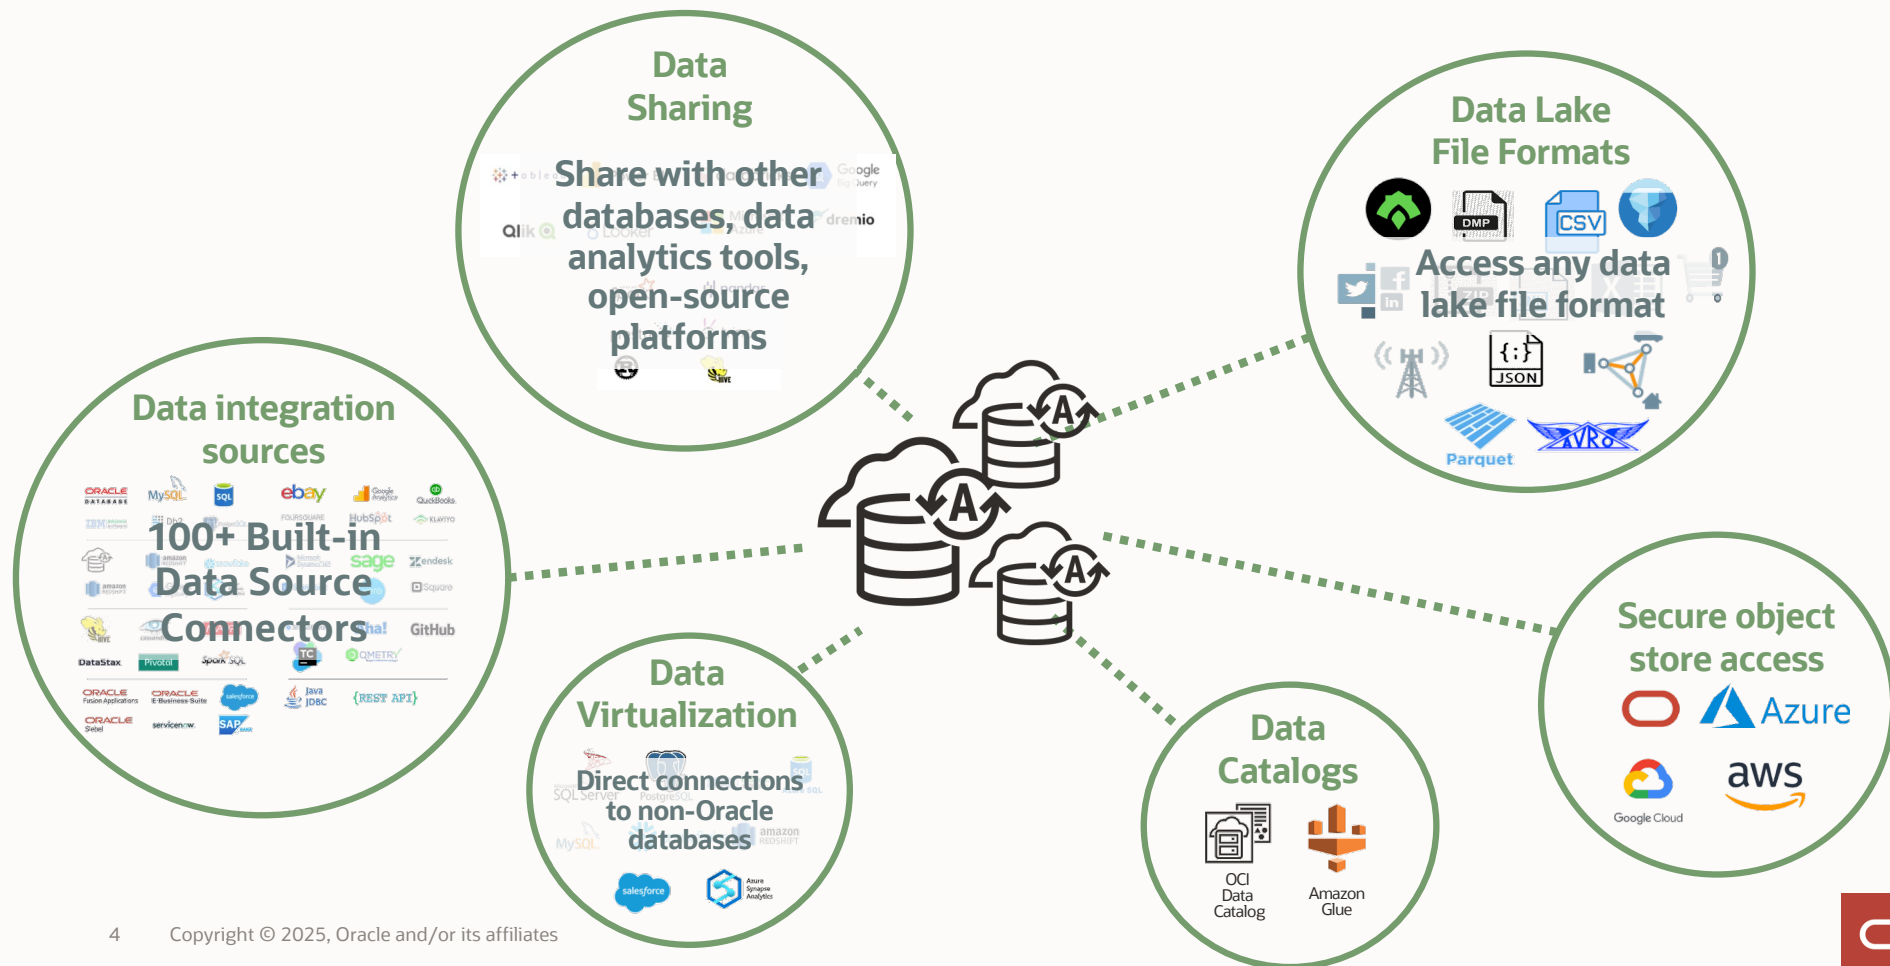

AI

Any Location

Any Data

The challenge

The role of Autonomous Database Data Studio

Data Studio simplifies Data Integration and Engineering for Analytics and AI

Autonomous Database Data Studio

Catalog Explorer

Search and discover data from across the enterprise

Data Load

Load, link, and feed data into the database

Data Transforms

Prepare, restructure and optimize data

Analysis and Insights

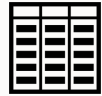

Model, query, and analyze your data

Data Share

Share data sets securely with stakeholders

Catalog Explorer - Discover, Understand and Integrate Data

Connected
Databases

Data Lake
Files

Data
Catalogs

Data
Shares

Data Studio Catalog Explorer

- Search across connected data assets in multiple catalogs
- Simple connectivity enables data integration without IT

Multi-catalog unified metadata

- Add catalogs from other databases, cloud stores, data catalogs and shares
- Search, discover and understand data
- Immediate SQL query access
- Integrate data in a few clicks – load, link or feed into the database directly from the catalog
- Trace data lineage and impact analysis

Table (25)		Updated 8 days ago
☐	PROMOTIONS dimension table without a PK-FK relationship with the facts table, to show outer join functionality 503 rows	☐
☐	TIMES Time dimension table to support multiple hierarchies and materialized views 1826 rows	☐
☐	SALES facts table, without a primary key; all rows are uniquely identified by the combination of all foreign keys 918843 rows	☐
☐	MEDICARE_STATE_DIM 61 rows	☐
☐	MEDICARE_GENERIC_DIM 2276 rows	☐

Data Load – Load, Link and Feed Data into the Database

Load data quickly and easily

- Load data from local files
- Load, link and feed data from:
 - Cloud stores
 - Databases
 - Shares
 - Marketplaces
 - Data Catalogs

Intelligent, and easy to use

- Auto-detects data types, column names, encoding
- Uses AI to detect Personally Identifiable (PI) data
- Sophisticated error handling
- APIs, REST, Python package and PL/SQL

LOAD DATA
Import data into your autonomous database.

LINK DATA
Leave your data in place and let your autonomous database access it.

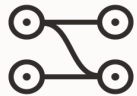

FEED DATA
Set up an ongoing feed of new data into your autonomous database.

CONNECTIONS
Manage URLs, Shares and Data Catalogs.

Table and View Loads Refresh Off

- ADMIN.RAW_CREDITS • 6 columns**
Create Table • raw_credits.csv • 77.2K rows loaded
Directory • STAGE\$ADMIN_MKZD7SR0MJG
Recently Updated ✓ Report
- ADMIN.RAW_TITLES • 13 columns**
Create Table • raw_titles.csv • 5.8K rows loaded
Directory • STAGE\$ADMIN_MKZD7SR0MJG
Recently Updated ✓ Report
- ADMIN.BEST_MOVIES_NETFLIX • 8 columns**
Create Table • Best Movies Netflix.csv • 387 rows loaded
Directory • STAGE\$ADMIN_MKZD7SR0MJG
Recently Updated ✓ Report

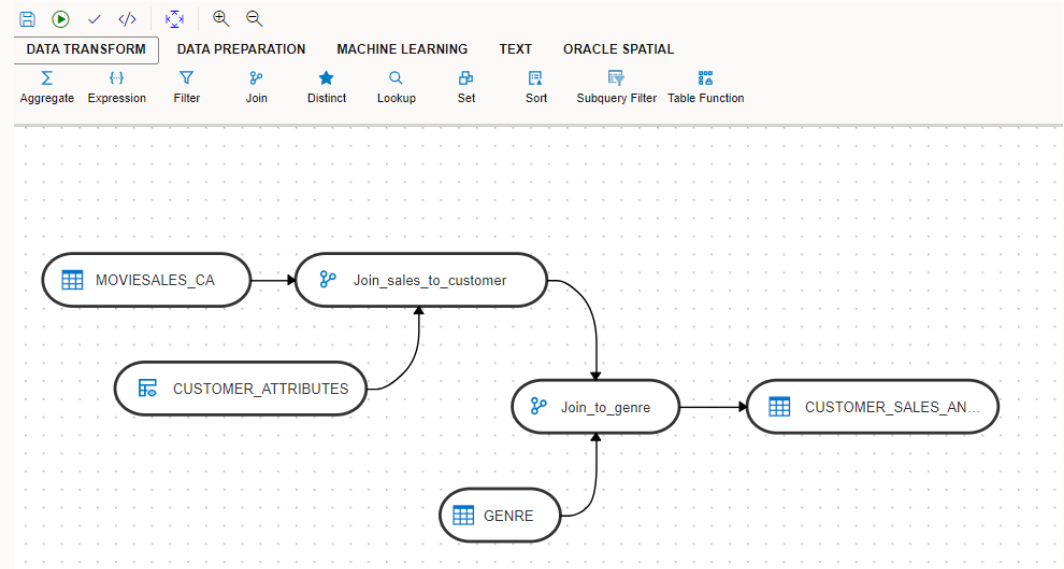

Data Transforms – Integrate, Prepare and Optimize Data

Integrate, transform and prepare your data

- 100s of connectors and operators
- Auto-code generation for application sources including Fusion, NetSuite and Salesforce

Comprehensive data integration

- Scalable Extract – Load – Transform engine
- Drag-and-drop UI
- Restructure, prepare, clean and enhance data for Analytics, Data Science, Machine Learning, Graph and Spatial
- Generate data flows from SQL
- Add in your own SQL if needed
- Schedule full or incremental extracts

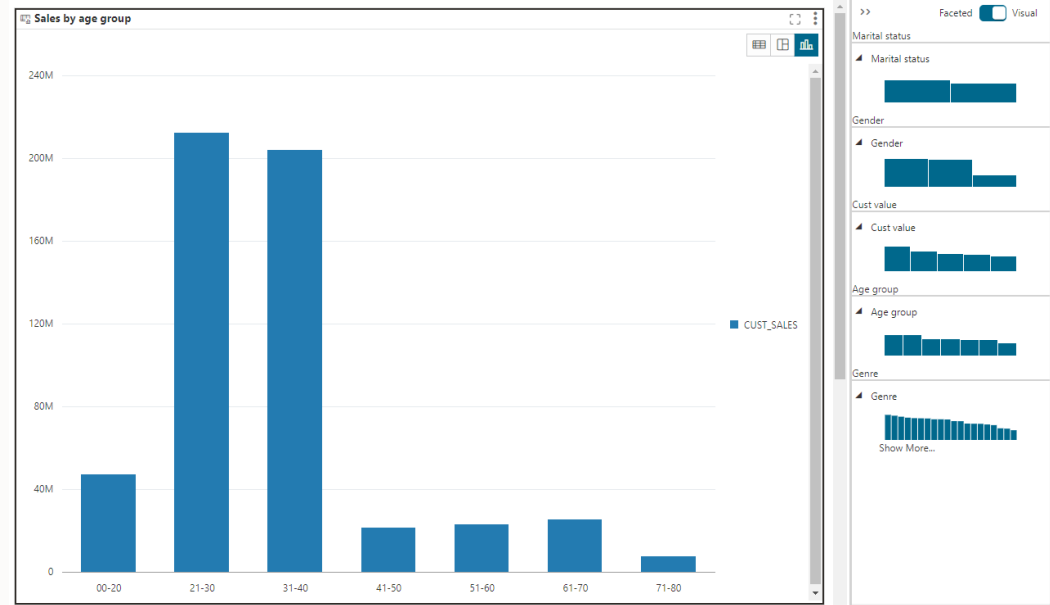

Analysis – Model, Query and Analyze your data

Model your data with Analytic Views

- Use simple tools and AI assistance to model your data into Analytic Views to make queries simpler and easier for all consumers
- Models are then available in Oracle Analytics Cloud, Tableau, Power BI, Google Sheets, Excel and with simple SQL

Query, Analyze and Experiment

- Explore data interactively combining Natural Language, SQL, and graphical tools
- Save and share interesting charts and analyses

Analysis – Spreadsheet Add-ins

- Use the provided **Microsoft Excel** and **Google Sheets** spreadsheet add-ins to query and analyze data in Autonomous Databases
- Collaborate on data without the need to export data from the database
- Easy to set up – no client connector software needed
- Use either SQL or the query wizard to analyze data in tables or Analytic Views
- Query multiple databases
- Access shared models and charts

	A	B	C	D	E
1	MOVIE SALES	SUM of SALES	SUM of PURCH	SUM of Profit	
2	DINKS	93,610	57,494	36,116	
3	Empty Nesters	246,842	156,730	90,112	
4	Married with Chil	532,084	313,478	218,606	
5	Mature Widowed	239,549	141,868	97,681	
6	Midage Female	673,550	386,112	287,438	
7	Midage Male	237,789	163,322	74,467	
8	Retired	211,995	142,730	69,265	
9	Single Female	846,611	483,642	362,969	
10	Single Male	996,288	627,678	368,610	
11	Young People	974,427	562,446	411,981	
12	Grand Total	5,052,745	3,035,500	2,017,245

Insights – Automate the discovery of data insights

Use AI to auto-generate insights into your data

- Search for hidden data anomalies and outliers either in tables or in Analytic Views
- Explore further in your analytic tool of choice

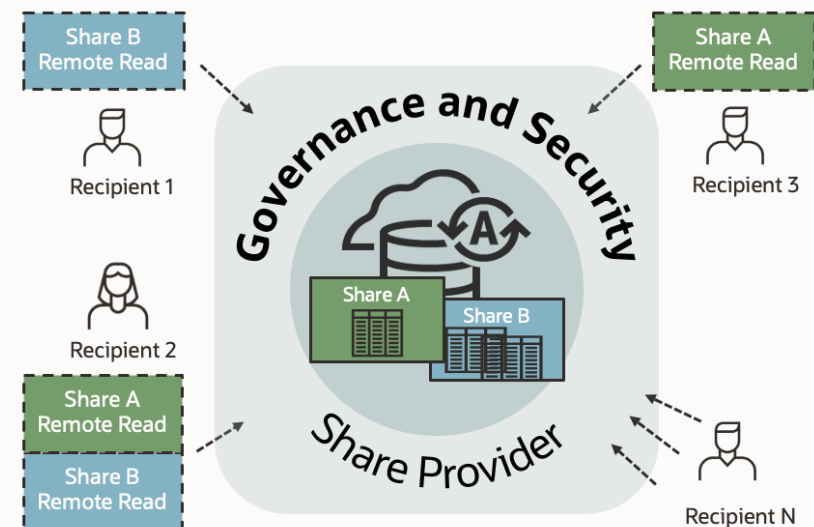

Data Share – Share data securely with stakeholders

Simple and secure data sharing using open standards

- Easily share tables and views with other Autonomous Databases using Cloud Links
- Share data securely with any Delta Sharing client
- Discover and consume shared data
- Govern your shares with fine-grained access control and simple access management

Publish data to the Data Marketplace

- Share curated data sets with other departments with the Data Marketplace
- Easily load and link published data sets

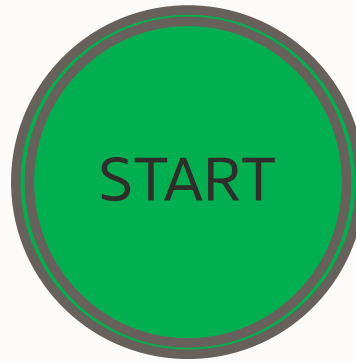

Summary

Built-in Autonomous Database Data Studio

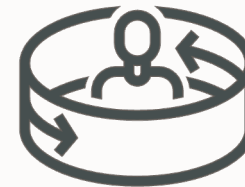

Pre-integrated

- Consistent interface
- Unified metadata

Pre-installed

- Nothing more to buy
- Nothing more to install

360 visibility

- Clear data lineage
- Clear impact analysis
