

ORACLE

Kick off your Oracle Cloud Journey

Presentation & Demo

Thank you for joining

Kick off your Oracle Cloud Journey

Housekeeping reminders during the webinar:

- The recording of this session will be posted [Oracle Video Hub Getting Started](#) where you will be able to review this session in your own time.
- You can also visit [OCI DigiHUB](#). This is our digital hub where you will find resources to help you navigate your Oracle Cloud Account and reinforce your learnings from the 'Kick off your Oracle Cloud Journey' webinar.
- For any other questions please contact us at: activate_lt_emea_grp@oracle.com

What we will cover today

- ✓ You will need your tenancy login and an Oracle account to login to the LiveLabs workshop page
- ✓ This session does not replace Oracle Learning Paths
- ✓ We would suggest you try the Live Labs Follow Along guide as a way to become familiar with your Oracle console
- ✓ Who is this session for: Account Admins, Tech Leaders, a person tasked with setting up OCI for an organisation, Tenancy Owner, etc.

Safe harbor statement

The following is intended to outline our general product direction. It is intended for information purposes only, and may not be incorporated into any contract. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described for Oracle's products may change and remains at the sole discretion of Oracle Corporation.

Oracle Cloud Key User Groups

You will need to link your Oracle Cloud Account to both Support and Billing Accounts.

Key Concepts and Terminology

Regions and Availability Domains

Oracle Cloud Infrastructure is physically hosted in regions and availability domains. A region is a localized geographic area, and an availability domain is one or more data centers located within a region. A region is composed of one or more availability domains.

Oracle Cloud Infrastructure resources are either region-specific, such as a virtual cloud network, or availability domain-specific, such as a compute instance.

Availability domains are isolated from each other, fault tolerant, and very unlikely to fail simultaneously or be impacted by the failure of another availability domain.

Tenancy

When you sign up for Oracle Cloud Infrastructure, Oracle creates a tenancy for your company, which is a secure and isolated partition within Oracle Cloud Infrastructure where you can create, organize, and administer your cloud resources.

Compartment

Compartments allow you to organize and control access to your cloud resources.

A compartment is a collection of related resources (such as instances, virtual cloud networks, block volumes) that can be accessed only by certain groups that have been given permission by an administrator.

A compartment should be thought of as a logical group and not a physical container. When you begin working with resources in the Console, the compartment acts as a filter for what you are viewing.

Oracle Cloud Identifier (OCID)

Every Oracle Cloud Infrastructure resource has an Oracle-assigned unique ID called an Oracle Cloud Identifier (OCID).

This ID is included as part of the resource's information in both the Console and API.

Oracle Cloud is Infrastructure, Platform, & SaaS in One Cloud

Demo

The background of the slide is a dark green color. In the top right corner, there is a large, bright yellow circle. Below it, there is a pattern of concentric, light green circles that fade out towards the bottom left. A small orange horizontal line is positioned below the word 'Demo'.

Let's go straight to your Tenancy and Get Started

Kick off your Cloud Journey LiveLabs

Follow along with the LiveLabs Demo

- To follow along at your own pace, you can use this link to access the OCI Demo Lab that were presented in the webinar.

The screenshot shows the Oracle LiveLabs interface. At the top, there's a search bar and a navigation menu. The main content area is titled "Kick off your Oracle Cloud Journey - Part 1!". Below the title, there's a video player showing a presentation slide titled "Cloud basics" with the subtitle "Oracle Cloud activation and basic concepts". To the right of the video player, there's a sidebar with details about the lab. It includes a "Share" button, a "Start" button, and a "Run on Your Tenancy" button. The sidebar also lists the organizer (Oracle), the duration (1 hour, 30 m), and an outline of the lab steps. The outline includes: Lab 1 - Create a Compartment, Lab 2 - Create a Virtual Cloud Network, Lab 3 - Generate SSH Keys, Lab 4 - Create a Compute Service, Lab 5 - Create and Attach a Block Volume Service, Lab 6 (optional) - Create an Object Storage Service, and Lab 7 (optional) - Cost Management. Below the outline, there's a "Prerequisites" section stating that familiarity with Oracle Cloud Infrastructure (OCI) is helpful.

- Use the link or the QR below to access the LiveLabs Demo

ORACLE

ORACLE

Working Effectively with Oracle Support

A comprehensive guide to navigating support processes across Oracle.

01

Getting Started with My Oracle Support

Understanding the unified sign-in experience and portal capabilities

03

Create Service Requests

Navigate MOS and OCI One Console to log and manage support tickets

05

Escalation Process

Understand when and how to escalate issues effectively

02

Oracle Support Best Practices

Learn how to structure effective service requests for faster resolution

04

Roles and Responsibilities

Clarify customer and Oracle support team accountabilities

06

Support Transactional Survey

Provide feedback to continuously improve support quality

 GETTING STARTED

Getting Started with My Oracle Support

The "My Oracle Support" Experience

UNIFIED SIGN-IN FOR CLOUD USERS

Access the portal: <https://support.oracle.com>

Select Your Sign-In Path

- Oracle Cloud Infrastructure and Cloud Applications
- Oracle Hardware, Software, and Managed Cloud
- Others including Oracle Hospitality, Food & Beverage

Core Capabilities

- Interact in support communities with peers and experts
- Search Oracle's extensive knowledge base for quick answers
- Create and manage service requests (SRs) efficiently
- Utilize proactive capabilities for managing your systems
- Download patches and more...

📄 **Available Documentation & Free Training:** Access comprehensive [My Oracle Cloud Support portal documentation](#) for detailed guidance

New User Registration

The Oracle Cloud Support portal features an intelligent routing system designed to streamline your access experience. When you enter your email address, the system automatically recognizes whether you're a new or existing user and guides you to the appropriate registration path. New users will see the message "We don't recognize your email" and receive step-by-step guidance to set up the correct account type for your specific Oracle services.

Registration Pathways

Option 1 Process: Sign in with your commercial cloud account, enter OCI credentials, associate your cloud account to My Oracle Cloud Support, accept terms of use, and complete your profile. Your account will show status: pending admin approval.

Option 2 Process: Create an Oracle account, verify your email to enable the new account, sign in with Oracle credentials, enter subscription ID and account name for identity verification, and complete your profile for admin approval.

Option 3 Process: Create a My Oracle Support account, verify email, sign in with Oracle credentials, connect your account by requesting access to user group, accept terms of use, and update your profile. Registration completes pending CUA approval.

Sign-In Experience for Existing Users

☁ ORACLE CLOUD INFRASTRUCTURE AND CLOUD APPLICATIONS

The unified sign-in experience provides a streamlined authentication process for Oracle Cloud Infrastructure and Cloud Applications users. The system intelligently recognizes your email address and automatically suggests the appropriate sign-in method based on your account type. This intelligent routing reduces friction and ensures you access the correct support resources quickly and efficiently.

01

MOS login page

Everyone begins at the new unified sign-in page. Simply chose to sign in with your commercial cloud account.

02

Select Tenancy

Choose your tenancy from the available options, along with your identity domain, then proceed to the next step.

03

Complete Authentication

Sign in with your credentials. Note that your login ID in OCI may differ from your email address.

Sign-In Experience for Existing Users

☁ ORACLE HARDWARE, SOFTWARE, AND MANAGED CLOUD

Users with Oracle Hardware, Software, and Managed Cloud services experience a tailored sign-in process designed specifically for their account type. The intelligent portal recognizes your credentials and directs you to the appropriate authentication method using Oracle SSO. This streamlined approach ensures secure access to your support resources while maintaining the flexibility to manage both cloud and on-premises solutions.

Enter Email Address

Start at the unified sign-in page and select Support for Oracle Hardware, Software, and Managed Cloud / Sign in Or create your oracle account

Oracle SSO Authentication

Complete sign-in to My Oracle Cloud Support using your Oracle Single Sign-On credentials.

AI-First Portal Design (New Experience)

Your My Oracle Support home page is now the **AI-powered starting point** for getting answers, resolving issues, and accessing support. Built around an AI-first experience, it allows you to simply ask questions and quickly receive relevant, contextual responses. The redesigned interface streamlines navigation while keeping key functions—like knowledge, service requests, and resources—easily accessible. Whether you're exploring solutions, tracking requests, or escalating an issue, everything is integrated into a seamless flow that guides you from discovery to resolution in one place.

1 Main Menu

knowledge, service requests, Patches and resources

2 News and Alerts

Stay informed about important updates and system notifications

3 Service Request Lists

View open issues categorized as "Needs attention", "Oracle working", with links to open SRs in MOS(**Export Capabilities**)

4 AI Assistance & Create service request

AI chat on the homepage lets users select a product, ask questions, receive answers with clarifications, and automatically recognize KB articles, SRs, or patch numbers to guide them or create a service request when needed.

5 Account Management

Access your profile settings and account preferences

The screenshot shows the My Oracle Support homepage. At the top, a navigation bar (1) contains links for My Oracle Support, Knowledge, Service Requests, Patches, and Resources. Below this, a row of alert cards (2) displays messages such as 'Planned Maintenance to My Oracle Cloud Support...', 'TEST: Unplanned Event for SaaS Application cu...', and 'Portal in Preview: Overview & Call to Action'. To the right, a user account menu (5) is visible with options like Notifications, Preferences, Give feedback, Sign Out, and Last sign-in Today 11:35 AM. The main content area features a large purple banner (4) with the text 'Ask a Question or Create a Service Request' and a search bar. Below the banner, a section titled 'These Service Requests need your attention' (3) displays a table of open requests. The table has columns for SR Number, Summary, Issue Type, Service, Status, and Updated. The first row shows SR Number 4-0006661915, Summary 'Applying PeopleTools 8.61 patch 14 ...', Issue Type 'Significant Impairment', Service 'PeopleSoft Enterprise PT PeopleTools', Status 'Customer Working', and Updated 'Sep 19, 20:...'.

SR Number	Summary	Issue Type	Service	Status	Updated
4-0006661915	Applying PeopleTools 8.61 patch 14 ...	Significant Impairment	PeopleSoft Enterprise PT PeopleTools	Customer Working	Sep 19, 20:...

Search and Knowledge Resources

The comprehensive search functionality in My Oracle Support provides instant access to a wealth of information across multiple resource types. By typing your query into the search bar on the home page, you'll receive relevant results from Knowledge articles, Documentation, and Community discussions. This unified search experience eliminates the need to check multiple sources, saving you valuable time and helping you find solutions faster.

Search Result Categories

Knowledge Articles

Clicking on any knowledge article opens a new document window with detailed technical information, troubleshooting steps, and best practices curated by Oracle experts.

Official Documentation

The top three relevant documentation results are displayed directly in your search results. Click any result to open it in a new tab at docs.oracle.com. Select "view more" to explore additional documentation.

Community Discussions

View similar issues and solutions shared by the Oracle user community. Click any link to open it in a new tab within Cloud Customer Connect. Access more community insights by selecting "view more".

Search by ID – Smart Recognition & Flexible Navigation

Users can enter a Knowledge Article ID, Service Request number, or Patch ID and instantly access the relevant resource—or choose to engage with AI for deeper guidance and troubleshooting.

AI-Assisted Exploration

Instead of simply opening the object, users can start an AI conversation to:

- Understand the issue in context
- Ask follow-up questions
- Get summarized insights and next steps

Flexible User Choice

Users are not locked into a single path—they can:

- View the object directly
- Start an AI-guided conversation
- Switch between both at any time

Service Request Analytics Dashboard

My Oracle Support Analytics delivers powerful, self-service insights into your Service Request activity through an intuitive dashboard interface. Launched directly from the Search Bar, this comprehensive analytics tool provides multiple interactive perspectives on SR trends, status, and performance. The dashboard empowers you to track resolution times, identify patterns, monitor team workload, and make data-driven decisions about your support strategy. With customizable views and real-time data, you gain complete visibility into your support ecosystem.

Key Analytics Features

Interactive Dashboards

Real-time Service Request data for instant insights.

Escalation & Status Visibility

- **Escalated SRs** – Monitor critical issues requiring higher attention

- **Open SR Summary –Open SRs by Age Buckets**

Ownership & Accountability

- **SRs Waiting on Customer** – See where your action is required
- **SRs Waiting on Oracle** – Track pending responses from Oracle Support

Operational Insights

- **SRs by Channel –by Environment –By Product Classification**

Visual Trends

Representations of SR distribution and performance trends.

- **Incoming SRs by Month** – Spot workload patterns
- **Median Days to Resolve** – Measure support efficiency
- **Top 10 User Groups by SRs** – Identify heavy users and training needs

Note: By default, these reports are based on the last 180 days. At the top of the dashboard, you can adjust the date range to tailor the data displayed to match your analysis needs.

Administration Functions

The Administration section provides Customer User Administrators (CUAs) with comprehensive tools to manage user access, security, and Service Request visibility across your organization. These powerful administrative capabilities ensure that the right people have access to the right information while maintaining security and compliance standards. Administrators can efficiently organize users into groups, control SR visibility, and manage SaaS environment assignments, all from a centralized interface.

User Management

Assign users to user groups to control visibility and security of Service Requests. Existing admins are automatically migrated from CSIs to User Groups with the same administrative role preserved.

SaaS Environment Control

Manage SaaS environment assignments to User Groups, ensuring appropriate access levels for different teams and environments within your organization.

Comprehensive Documentation

Access detailed guidance in the [My Oracle Cloud Support portal documentation](#) for complete understanding of administration functions.

☆ BEST PRACTICES

Oracle Support Best Practices

Best Practices for Submitting a Service Request

1. Problem Summary

Provide a clear, concise title that captures the core issue

2. Problem Description

Explain the issue in detail with context and background

3. Oracle Cloud Identifiers

Include OCIDs for DB Systems, Exadata infrastructure, VMs, DBs, OHs, and Work Requests

4. Timestamp

Document start time, end time, and total duration of the issue

5. Version Details

Include Exadata/Database Cloud versions: image info, GI, DB versions

6. Evidence

Attach logs, screenshots, and diagnostic data (TFA, DBaaS diag logs)

7. Business Impact

Describe impact in detail with milestone dates and severity justification

Key Questions to Answer

- What has **changed** in your environment?
- Has this issue happened before?
- What **troubleshooting steps** have you already tried?
- What is your **current system setup** and configuration?
- Can you **replicate** the error or problem consistently?
- Does the error occur every **time** or intermittently?
- Are **other users** experiencing the same problem?

Pro Tip: Diagnostic data is vital for expediting analysis and critical error diagnosis.

Include relevant error numbers, troubleshooting results, and screenshots.

Important Notes:

- Customers should always choose **the correct (User Group)** when creating the SRs
- Choose **correct cloud** service offering
- Submit **one issue** per service request

SR Severity Levels and Business Impact

Selecting the appropriate severity level and understanding Oracle's response commitments are essential for managing support expectations. Severity is determined by your business impact combined with the issue type you select. Always verify [the Cloud Hosting & Delivery Policy \(Chapter 5\)](#) for detailed service level agreements and response time commitments.

Engage with your Support Engineer to establish mutually acceptable timelines and action plans. Remember that **severity level** and **Management Attention** are distinct mechanisms—use Management Attention to escalate within a given severity when additional oversight is needed.

Sev 1

Sev 2

Sev 3

Sev 4

Issue type	Critical Outage	Significant Impairment	Technical Issue	General Guidance
OCI Console	Critical	Urgent	Standard	Low
Oracle 1st Response	< 15 Minutes	====	====	====
Resolution Time	Co-Owned	Co-Owned	Co-Owned	Co-Owned

 **Important:** Severity and Management Attention are always set based on Customer's Business Impact

Key Input for Service Requests

Three primary dimensions determine how Oracle Support handles your Service Request: Issue Type, Business Impact, and System Lifecycle. Understanding how to classify your situation accurately ensures appropriate resource allocation and response times. These classifications work together to set expectations and guide the support process from initial submission through resolution.

Issue Type (Sets Severity)

- **Critical Outage:** Key system or function is down or unstable. You or a backup are available 24/7 to resolve it. Review [Critical outage examples](#) for detailed criteria
- **Significant Impairment:** Critical system or function has major service loss. Operations are limited, and you're available during business hours
- **Technical Issue:** Functionality, errors, or performance issue impacting some operations
- **General Guidance:** Product or service usage question, setup, or documentation clarification

Business Impact

- **System Unavailable:** Complete loss of service or system access
- **System Partially Available without Workaround:** Degraded functionality with no alternative path
- **System Partially Available with Workaround:** Degraded functionality but operations can continue
- **System Fully Available:** Minor issues or questions with no operational impact

System Lifecycle

- **Production Live:** A live production service or system
- **Production Feature Implementation:** Extending a live production system
- **New Implementation:** System going live in the near future
- **Non-Production:** Development, test, or non-live environments

Business Impact: The Critical Differentiator

A well-articulated business impact statement is the cornerstone of effective support engagement. Support engineers need to understand not just what is broken, but *why* it matters to your business. The difference between a productive support interaction and a frustrating one often comes down to how clearly you communicate the operational consequences of the technical issue.

WHAT is happening

WHO is affected

WHEN it occurs

WHY it's critical

Real-World Example: Insufficient vs. Sufficient Detail

✗ Insufficient Detail

"Our Oracle database is slow. We need help urgently. It's affecting our business operations."

✓ Sufficient Detail

"Our Oracle Database 19c production environment (RAC 2-node cluster) is experiencing severe performance degradation. Query response times have increased from 2 seconds to 45+ seconds. This affects our 500 internal users and 50,000 external API consumers. The issue started at 9:15 AM today and is ongoing. We've attached AWR reports and trace files. Our peak transaction processing window is 9 AM-5 PM EST. Without resolution, we'll lose approximately \$50,000 per hour in transaction revenue. We need this resolved by 2 PM EST today."

 SERVICE REQUEST

Create a Service Request (SR)

Create a Service Request (AI-First Experience)

☁ FINDING SOLUTIONS FASTER

Oracle's AI-powered support portal helps you get answers quickly—often resolving issues before creating a service request.

Start with AI

Ask questions directly from the homepage and get instant, contextual answers powered by AI.

Guided Assistance

AI asks clarifying questions and guides you toward the right solution or next step.

Smart Recognition

Automatically detects KB articles, SRs, and patch numbers—taking you directly to relevant resources.

Seamless SR Creation

If needed, create a service request with pre-filled details based on your conversation.

Creating a Service Request – AI-First Flow

The new AI-first experience helps you resolve issues faster by starting with intelligent guidance and only creating a service request when needed.

The "Create Service Request" option typically appears after the 3rd interaction (turn) in the AI chat

Our Goal: Help you get answers quickly. This is designed to: Encourage users to **try resolving the issue via AI first** /Reduce unnecessary SR creation

Creating a Service Request

The system **automatically carries over context from the conversation** Its **pre-fills key SR fields**, including:

- **Product** (based on selection in chat)
- **Issue type**
- **SR summary**
- **SR description (generated from the conversation)**

Service Request Activity Tab

The Service Request interface features two primary tabs—Activity and Details—providing flexible ways to manage and track your support cases. The Activity tab serves as your communication hub, displaying the complete conversation history between you and Oracle Support. You can seamlessly switch between tabs at any time, allowing you to add updates, attach files, and monitor progress without interrupting your workflow. This intuitive design ensures efficient case management and clear visibility into resolution status.

Activity Tab Actions

Add Messages

Communicate directly with Oracle Support by adding new messages to your Service Request

Attach Files

Upload supporting documentation, logs, or screenshots (automatically switches to Details tab)

Sort Messages

Organize conversation history chronologically or by message type for easier navigation

Filter Content

Focus on specific message types to quickly find relevant updates and responses

 **Pro Tip:** Check your Activity tab daily during active troubleshooting. Enable email notifications to receive immediate alerts when your Support Engineer posts updates, ensuring you don't miss critical requests for information.

Service Request Details Tab

The Details tab provides comprehensive management options for your service request, from tracking milestones to requesting escalations.

OCI AI Resolution Agent

AI-assisted support, with human expertise when it matters

OCI AI Resolution Agent can help eligible Service Requests move forward faster—while keeping complex or sensitive issues with an expert.

What this means for you

Faster initial engagement for eligible requests—without compromising access to specialist support when your issue needs deeper investigation.

 OCI CONSOLE

SR From OCI One Console

OCI: Start SR Creation

Creating Service Requests directly through the Oracle Cloud Infrastructure (OCI) Console streamlines your support experience with automatic context capture and faster routing to the right teams.

01

Learn the Benefits

In the OCI Console, navigate to the Secure Desktops area **and open the resource involved in the issue** (e.g., Desktop Pool, listing of Desktop Pools, or Storage Volume).

02

Access Support Options

From the resource details page, use the option to create a Service Request (SR)

03

Create Your Request

Click "Create Support Request" to begin the guided submission process with pre-filled contextual information.

Console SR Creation Benefits

Create a support request

Select from the options below to describe your issue. After you create the support request, you can track it in the support requests page.

User group

Required

Issue summary
ORA-00600 error: Database version, error context, and environment details needed

Required

Remaining characters5

Describe your issue
I need help with an ORA-00600 database error message. I want to create a service request.

Remaining characters1411

Avoid entering confidential or sensitive personal information. For more information, see [Oracle GCS security practices](#).

Select impact of issue

Critical outage

A critical production system or a critical business function is unavailable or unstable. You or an alternate contact are available to work this issue 24x7 if needed.

Significant impairment

A critical system or business function is experiencing severe loss of service. Operations can continue in a restricted manner. You are available to work during business hours.

Technical issue

Functionality, errors or performance issue impacting some operations.

General guidance

Product or service usage question, setup or documentation clarification.

Advisory

Oracle Support requires a 24x7 contact be provided so additional information can be requested as needed. In order to provide the most efficient resolution for our customers, Oracle reserves critical outage (severity 1) for the following issues:

- A critical production system or a critical business function is completely unavailable or unstable that you cannot reasonably continue work.
- Ongoing operation of the supported functionality is mission-critical to your business, and the situation is an emergency.

☐ Agree to the critical outage (severity 1) requirements.

 STRUCTURE

Roles and Responsibilities

Roles and Responsibilities

Successful Service Request resolution requires clear partnership between customer and Oracle Support teams. Understanding mutual responsibilities ensures efficient collaboration, appropriate resource engagement, and timely issue resolution. Both parties play critical roles in the support lifecycle—from initial problem description through final resolution and knowledge capture.

Customer's Duties

- **Comprehensive Problem Documentation:** Provide clear summary, detailed description, error codes, software versions, and affected user groups
- **Business Impact Clarity:** Articulate WHAT, WHO, WHEN, and WHY of the issue's impact on operations
- **24/7 Availability:** For Critical Outage scenarios, ensure technical contacts are accessible around the clock
- **Timely Response:** Reply promptly to Support Engineer inquiries and data requests
- **Escalation Management:** Initiate escalation process when standard resolution paths don't meet expectations

Support's Duties

- **Prompt Response:** Meet defined response times based on Issue Type and severity level
- **Extended Engagement:** Coordinate with Development, CloudOps, and other Oracle teams as required
- **Escalation Execution:** Respond to escalation requests and deliver on agreed action plans
- **Critical Outage Protocol:** First objective is finding a workaround to restore operations at the earliest opportunity, followed by identifying permanent long-term solutions
- **Continuous Engagement:** Work 24/7 on Critical Outage situations until resolution or stable workaround is achieved

Status Codes Service Request

Understanding SR Ownership and Action Items

Service Requests in Oracle Cloud shift through various status codes as they progress toward resolution. Understanding these codes is critical for determining who owns the next action—whether it's your team or Oracle Support. An active SR changes status frequently, and responding quickly to "Customer Action" codes keeps momentum moving forward and accelerates resolution.

Let's explore the key status codes you'll encounter and what they mean for your workflow.

Service Request Status Codes

Understanding SR status codes is essential for tracking progress and knowing when action is required from your team. An active Service Request changes status frequently as it moves through the resolution lifecycle. These status indicators clearly communicate ownership of the next action—whether it's with Oracle Support, the customer, or a specialized team like Development or Cloud Operations.

Customer Action Codes

Customer Working

Oracle Support is waiting the SR with requested information or test results or you to update

Solution Offered

A potential solution has been provided, and Support is awaiting your feedback on its effectiveness

Close Initiated

No customer response within Support-designated timeframe; closure process has begun

Pro Tip: Respond quickly to "Customer Action" status codes to maintain SR momentum. Delays in customer response can significantly extend overall resolution time, particularly for complex technical issues requiring iterative testing.

Service Request Status Codes

Understanding SR status codes is essential for tracking progress and knowing when action is required from your team. An active Service Request changes status frequently as it moves through the resolution lifecycle. These status indicators clearly communicate ownership of the next action—whether it's with Oracle Support, the customer, or a specialized team like Development or Cloud Operations.

Support Action Codes

Work in Progress

Next action is owned by Oracle Support—actively investigating implementing solution

Development Working

Issue has been escalated to Development team, with Support Engineer maintaining follow-up responsibility

Review Update

Oracle Support needs to review recent information and update the SR with findings

Operations Working

Cloud Operations team is actively working the issue—typically for infrastructure or platform concerns

Pro Tip: Make sure any answer or information provided inside the Service Request is properly documented with all needed details. This will allow Support, Development and Operations to be more accurate in their response

 TEAM STRUCTURE

Escalation Process

When to Consider Escalation

Key triggers to initiate the standard escalation process

No Value-Add Response

If your Service Request hasn't received meaningful attention, first ensure you and the Support Engineer have agreed on expected response timelines. If deadlines pass without updates, engage the engineer directly. Still no response? Time to escalate.

Critical Milestone at Risk

If your project has an upcoming go-live or critical milestone and the SR shows insufficient progress, communicate the urgency to the engineer. If the situation doesn't improve, escalate immediately.

Circular Progress

When you feel stuck in a repetitive loop with the Support Engineer and making no forward progress toward resolution, escalation can help break the cycle and bring fresh perspective.

Bounced Between Teams

If your SR is being transferred repeatedly between engineers or teams, first request a call to understand why. If you can't reach consensus on ownership and approach, escalation may be necessary.

Conference Request Denied

When a Support Engineer declines your request for a web conference, ask them to explain their reasoning. If you believe a conference is essential and reach an impasse, consider escalating.

Escalating a Service Request

Purpose of the Process

The escalation process ensures critical Service Requests receive appropriate management attention, resources, and priority when standard resolution paths aren't meeting expectations.

Timely Resolution

Accelerate progress on critical requests

Enhanced Coordination

Improve communication and resource allocation

Management Engagement

Involve support leadership when needed

Better Prioritization

Ensure appropriate severity handling

Pre-Submission Checklist

Before submitting a Manager Request, carefully review your Service Request to ensure it contains all necessary information:

- 
- Is the problem statement clear and accurate?
 - Does it describe business or implementation risk?
 - Is the severity level appropriate for the situation?
 - Is any proposed workaround impractical or inappropriate?
 - Are critical milestone dates clearly documented?

How to Submit a Manager Request

01

Access My Oracle Support

Navigate to <https://support.oracle.com> and log in with your credentials.

02

Locate Your Service Request

Find the relevant SR from your dashboard or search functionality.

03

Access Manager Actions

Under "Details" section, locate "Manager Actions" and click "Request Manager Action".

04

Complete the Form

Answer the question "How can the manager help?" with specific, actionable details about your escalation needs (Escalation Reason- Business impact- **Clearly Request a Manger call back**)

05

Optional: Chat with Live Support agent

Access My Oracle Support portal at <https://support.oracle.com>, Sign In then locate the **chatbot** widget  in the lower-right side of the page, initiate the chat, and type **“live Agent”** to connect with a live agent.

 In Case of the portal in not Available you will be directed to appropriate channel

Status ↕

Action

What to Expect After Submission

Response Time

30 minutes for Severity 1 (Critical Outage), 60 minutes for other severities.

Manager Collaboration

Manager works with Support Analyst to create an Action Plan with clear resources and communication strategy.

Escalation Path

Further escalation considered if initial action plan doesn't resolve the issue.

Before Ending Your Call

- Agree with the manger to Flag the SR as **Escalated** after Validation
- Confirm who owns each specific action item
- Establish a clear communication plan with defined checkpoints
- Document next steps and expected timelines

 Learn More: [Request Management Attention \(FAQ7648\)](#)

Escalating a Service Request

When standard support processes don't deliver expected results, Oracle provides a structured escalation path to engage higher levels of management attention. Effective escalation requires clear communication, documented action items, and mutual agreement on timelines. This ensures your critical issues receive appropriate oversight while maintaining productive relationships with Support teams.

Support Best Practices

Do These Actions

- Select the **correct issue type** when creating your SR to ensure proper routing
- Document the **business impact** clearly—quantify the effect on operations, revenue, or users.
- Include **all possible information** from the start: logs, screen captures, detailed descriptions, actions already taken, and affected environments
- Transmit urgency by **working promptly** with the Support team and responding to requests quickly.
- Be aware of **service hours** for your assigned engineer. Request time zone reassignment if needed via the **_Chat support**.
- [Request Management Attention](#) to communicate critical business impact, discuss showstoppers, or address dissatisfaction with SR progress
- Enable **notifications** from Oracle Support to stay informed of SR updates
- Request an **Oracle Web Conference (OWC)** when complex troubleshooting requires live collaboration
- Privilege **communication in English** for fastest response times in EMEA.
- Request **SR closure** once you have a working solution to keep your SR queue clean

☁ **Note:** SR follow up and action is exclusive responsibility of Client/Partner resources assigned to work with Oracle Support.

Avoid These Actions

Don't Request 24x7 Unnecessarily

Only request 24x7 support if staff will be available around the clock to work with Support. [Refer to Oracle Cloud Hosting and Delivery Policies \(chapter 5.3.1\).](#)

Don't Abandon Service Requests

Delaying your response stops progress and may result in auto-closure. SR follow-up is the exclusive responsibility of client/partner resources.

☁ **24x7 Shift Implications:** When a Severity 1 SR transfers between EMEA and US East Coast shifts, isolation time impacts resolution. New Sev1s are assigned to engineers with maximum business hours remaining to optimize troubleshooting time.

Tips and Tricks

Escalation Management

- Always request SR be **marked as escalated** to get an Escalation Manager assigned
- Escalation must be **driven by an Escalation Manager** from Oracle Support

24x7 and Severity

- Don't request **24x7** only for engineer reassignment without justified impact
- Don't raise severity without business impact justification
- Severity raise alone does **NOT represent** an escalation

Process Guidelines

- Account Team **cannot log SRs** on your behalf—use your user group.
- Don't escalate without **business impact** (SR age alone isn't a trigger)
- Simply saying "urgent" without context **isn't sufficient**.

Understanding Key Distinctions

Technical Solution

A complete fix for your issue, provided in the CMOS SR as the top priority outcome.

Workaround

A temporary solution to unblock you while a permanent fix is developed. Pursued when no known solution exists.

RCA (Root Cause Analysis)

Investigation into what caused the issue and preventive actions. Requested after resolution, typically takes 2+ weeks to complete.

Process Failure

- A gap requiring process improvement (e.g., handoff delays, repetitive questions). Addressed via email to Oracle Support management after technical concerns are closed.

 FEEDBACK

Support Transactional Survey

Support Transactional Survey (STS)

Purpose & Goals

Support's goal is to ensure customer satisfaction by focusing on customers, performing ongoing self-assessments, and continually improving service delivery. The STS continuously assesses service quality to gauge customer perception and incorporate the "Voice of the Customer" into improvement activities.

Accountability & Action

We drive accountability and action at all levels by providing performance feedback to support individuals, management, and leadership. This refines strategic plans, improves skills, creates action plans, and sets baselines, allowing us to "Close the Loop" with customers.

Invitations, Surveys & Survey Requests

- Email invitation sent to eligible contacts within 6 hours of first SR close
- Invitation frequency determined by Line of Business—ranging from one per two weeks to one per SR
- Invitation auto-expires after 14 days
- Survey URL is unique and single-use only
- Contacts can unsubscribe from future STS surveys via email footer

Sincerely,
Sameer Patkar
Vice President, Oracle Support

This is a screenshot of the Oracle STS survey form. It starts with the Oracle logo and a note: "Questions marked with a * are required." The service request is identified as "Service Request: 5-20201221001 - Sample Aligned Survey". A rating question asks: "* Please rate your level of satisfaction with this Service Request. (Rating scale is 1 to 5 stars with 1 star being Not At All Satisfied and 5 stars being Extremely Satisfied.)" with a 5-star rating displayed. Below this is a text box for "What could we have done differently to improve your experience with this Service Request?". Another question asks: "* Did we solve your problem?" with radio buttons for "Yes" and "No". The next section is "Please rate your level of satisfaction with the following aspects of your support experience." with five items: "Technical expertise to resolve your issue", "Communication during resolution process", "Timeliness of resolution", "Ease of getting your issue resolved", and "May we contact you about your feedback?". Each item has a 5-star rating scale. The "May we contact you about your feedback?" question has radio buttons for "Yes" and "No". A green "Submit Survey" button is at the bottom. The footer contains: "© 2020 Oracle | About Oracle's Customer Experience Program | Terms of Use and Privacy | Contact Us" and the Oracle logo.
