

ORACLE

Choice and Flexibility of Deploying Oracle Database Services in Google Cloud

OCI Multicloud

Multicloud *just makes sense*, but has been hard to get right

98%

of companies use
two or more clouds

31%

of enterprise workloads
run in the cloud

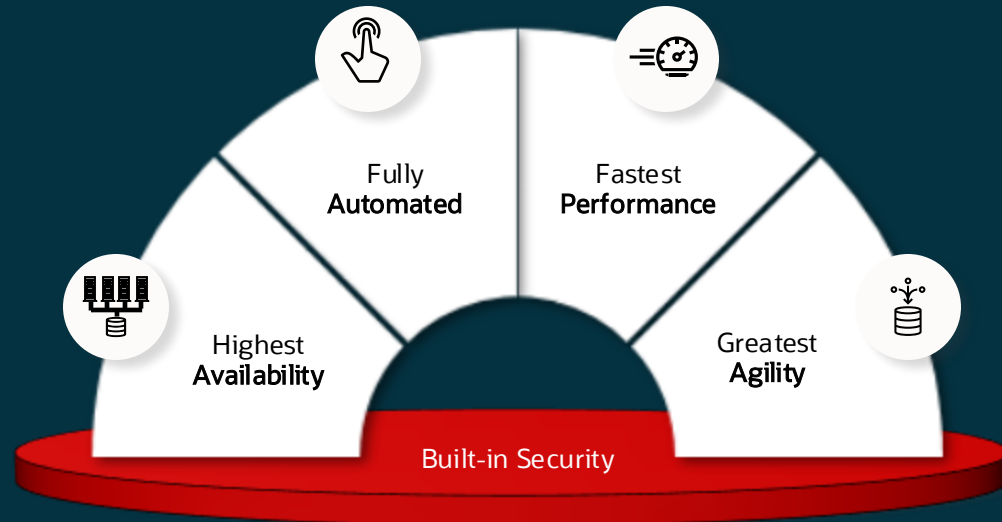

Motivators

- Best-of-breed cloud services and applications
- Business agility and innovation
- Cloud vendor lock-in concerns
- Data residency
- Cost optimization

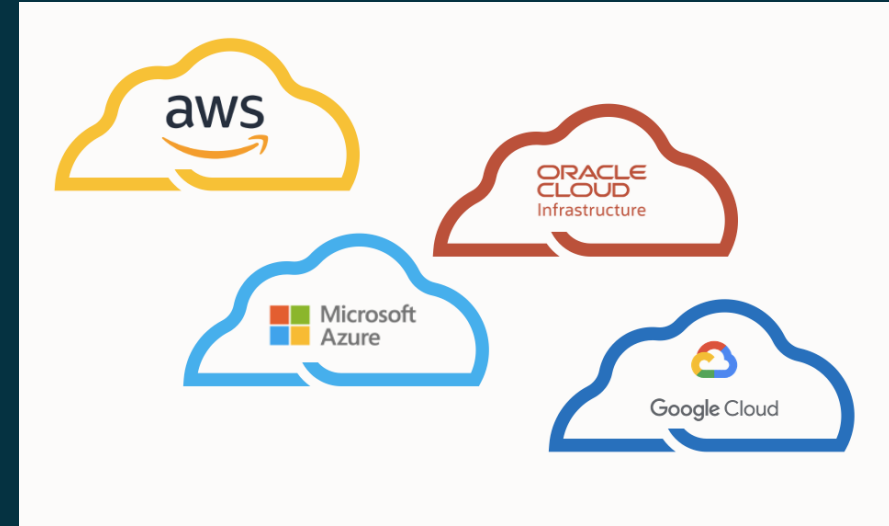

Challenges

- Operational visibility and management across clouds
- Data management and governance
- Ensuring security across clouds
- Workload and data mobility
- Network interconnectivity

You trust Oracle Database

Oracle Database

Hyperscale Cloud

And you want choice of running your workloads in any cloud

Key Multicloud Use Cases

Migrate Oracle Database workloads easily

Migrate databases with trusted tools like Oracle Zero Downtime Migration (ZDM), without re-platforming

Run applications with Amazon EC2, EKS, and Lambda, Azure VMs and Kubernetes, or Google Kubernetes Engine, and Oracle Database Services

Innovate faster with data and AI

Build AI applications or enhance existing applications with Azure AI, Google Gemini and Vertex AI, AWS Bedrock and Q, and Oracle Database AI Vector Search

Unify data across AWS S3, Azure Data Lake and Fabric, Google BigQuery, and Oracle Database Services

Simplify management and operations

Leverage existing investments: Purchase in Marketplace and use existing AWS, Microsoft Azure, or Google Cloud commitments, and Oracle license benefits

Native management and operations: Management, Monitoring, Logs, Metrics, Billing all in your AWS, Azure, or Google Cloud consoles

Collaborative support between OCI and other cloud service providers

Customers can now deploy Oracle Database Services in any cloud

“Seeing two strong partners like **Oracle and AWS** come together delivers a platform ease of use. Instead of spending all the time integrating, we can spend time innovating because you did the integration for us.”

Andy Zitney, EVP and CTO

“With **Oracle Database@Azure**, we’ve been able to leverage cross-cloud low latency to improve application performance and streamline the management of our IT infrastructure. This helps us deliver solutions and services that improve clients’ operations, increase efficiencies, reduce costs, and enhance the customer experience.”

Mark Prout, Chief Technology and Information Officer

“With the unparalleled quality of D&B data, we can now seamlessly **integrate Oracle Database’s** performance, reliability, and scalability **with Google Cloud’s powerful analytics and AI tools**. This synergy allows us to process and analyze massive datasets with unprecedented speed and efficiency, extract deeper insights, and deliver more value to our customers.”

Adam Fayne, vice president, Enterprise Engineering

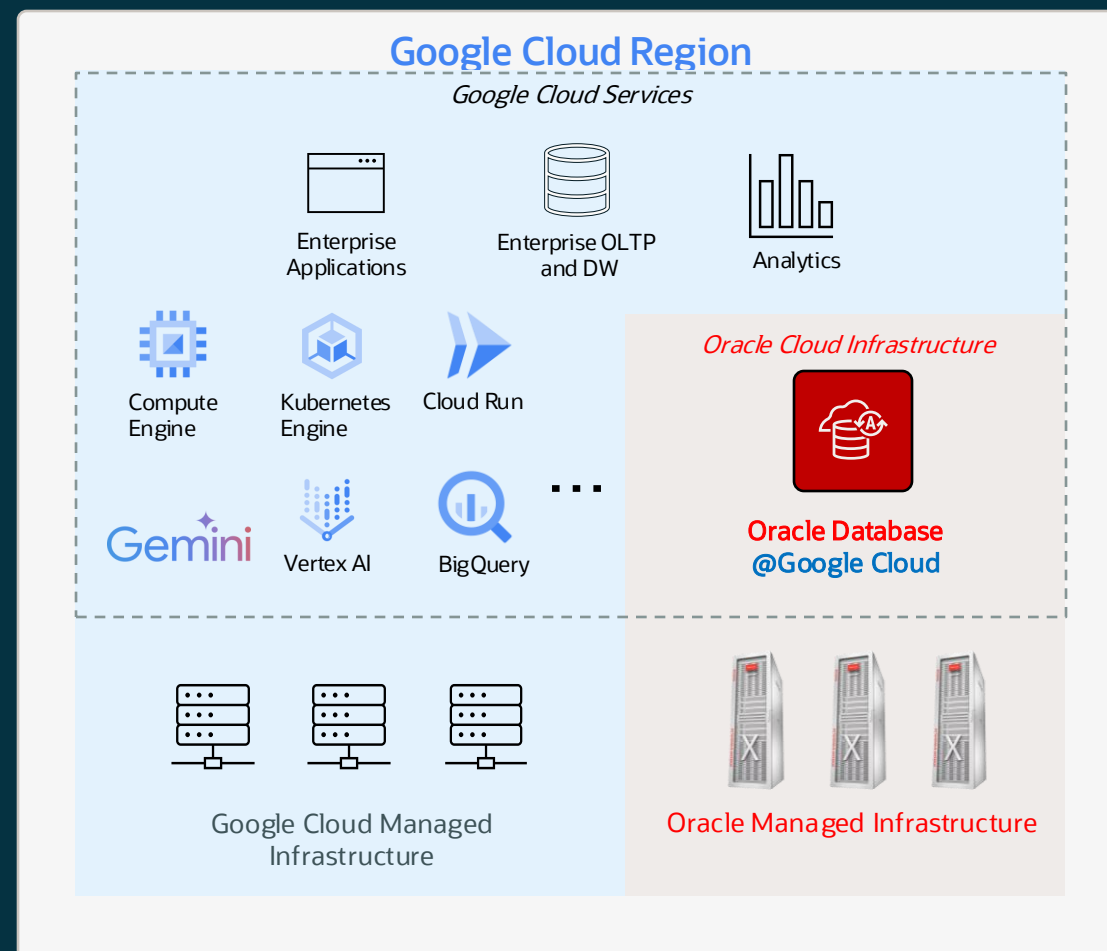

Intro to Oracle Database@Google Cloud

Oracle Database@Google Cloud

Run Oracle Autonomous Database and Exadata Database service on OCI collocated in Google Cloud datacenters

- Purchase Oracle Database services through Google Cloud Marketplace
- Provision and deploy Oracle Database services running on OCI within native Google Console and APIs

Oracle Database@Google Cloud

Technical & Commercial benefits

FULL FUNCTIONALITY

- Run latency-sensitive apps, with μ s latencies
- Highest database performance, availability, security, and scale
- Includes: RAC, Exadata, Autonomous Database
- Embedded AI: Vector search, Select AI

SEAMLESS EXPERIENCE

- Native Google Cloud console and API experience
- One place for monitoring, ops, billing, etc.
- Leverage both Google Cloud and Oracle skills

MARKETPLACE & PROGRAMS

Pay-as-you-use or custom pricing

Leverage existing investments:

- Google Cloud Commitments
- Oracle Database Licenses (ULA, BYOL)
- Oracle Support Rewards

JOINT SUPPORT

- Collaborative support
- Ability to speak to either Oracle or Google Cloud and seek help

Oracle Database@Google Cloud offerings

Available

Autonomous Database Serverless

- Fully managed and automated provisioning, patching, upgrades, hardware refreshes with enterprise-grade business continuity
- Built on Oracle Exadata infrastructure
- Elastic resources and pay-as-you-use billing
- Built-in AI, Vector Search

Exadata Database Service on Exascale Infrastructure (ExaDB-XS)

- Unites the best of Exadata's database intelligent architecture and cloud elasticity to deliver extreme performance for AI, analytics, and mission-critical workloads at any scale

Available

Exadata Database Service

- Dedicated, Oracle-managed infrastructure for most challenging workloads and performance/isolation
- Scale-out design, database-optimized compute, networking, storage
- Full control of database management and control plane
- Built-in optimization for OLTP, analytics, and consolidation

OCI Autonomous Recovery Service

- A fully managed data protection service protects Oracle Database changes in real-time and validates backups

Planned

OCI GoldenGate

- A managed service uses replication to keep data highly available and enables real-time analysis

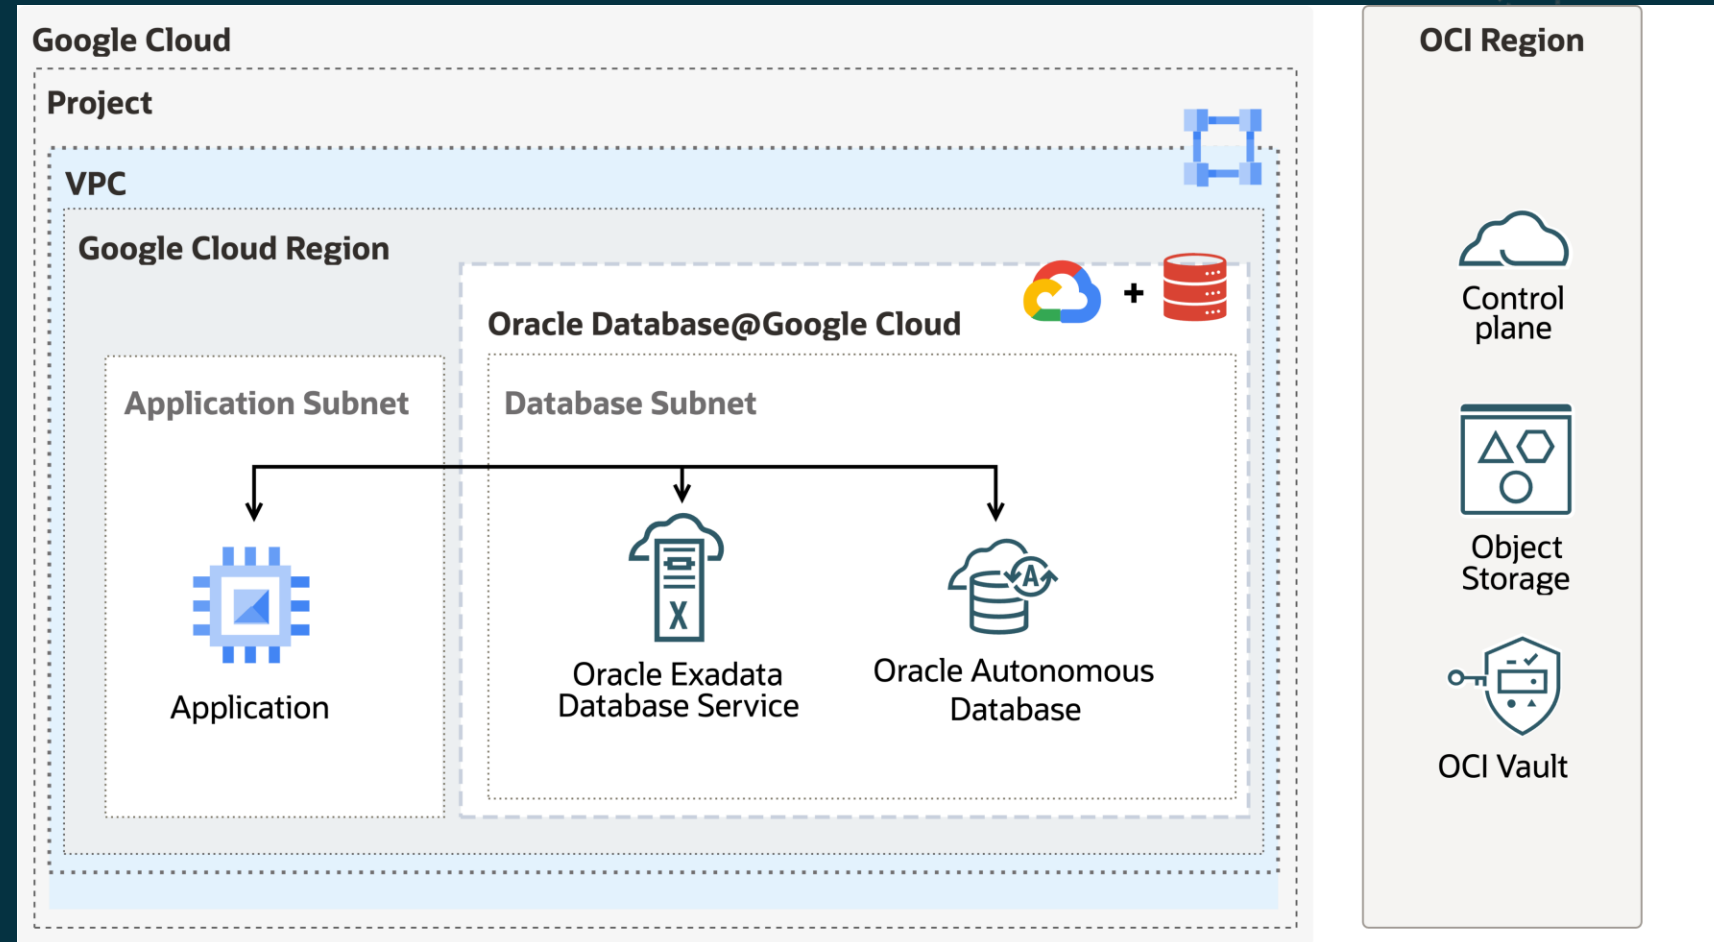

Autonomous Database - Dedicated

Globally Distributed Database

Oracle Database@Google Cloud Architecture

High-level Architecture: ExaDB-D & ADB-S

- OCI Exadata Cloud infrastructure co-located inside of Google Cloud Datacenter
- ExaDB-D and ADB-S deploy into a customer-specified VPC and subnet in a Google Cloud region
- OCI Object Storage can be used for backups

Detailed Architecture: ExaDB-D & ADB-S

- Oracle manages connectivity between Oracle Databases and application within Google Cloud Region
- ExaDB-D and ADB-S subnets located in the VCN of the customer's OCI tenancy
- OCI Vault or OKV can be used for Customer-managed keys
