Multicloud customer stories in EMEA

Leveraging Oracle Database Cloud Services for proven benefits

Vodafone modernizes thousands of on-premises database workloads on Oracle Autonomous Database and Cloud@ Customer lowering costs

<https://www.oracle.com/customers/vodafone-uses-oracle-cloud/>

Liantis relies on Oracle Database@Azure to strengthen security and resilience, with cost savings and scalability

<https://www.oracle.com/customers/liantis/>

NHS Shared Services migrates to Oracle Exadata Database Service on OCI accelerating supplier payments and increased payment accuracy

<https://www.oracle.com/customers/nhssbs/>

Deutsche See modernizes IT with multicloud architectures on OCI and Azure, optimizing costs and accelerating their business goals

<https://www.oracle.com/customers/deutsche-see-case-study/>

Deutsche Bank partners with Oracle to accelerate technology modernization, migrating bulk of its Oracle database estate to Oracle Exadata Cloud@Customer

<https://www.oracle.com/news/announcement/oracle-and-deutsche-bank-2021-06-24/>

Reale Group deploys their most important workloads to OCI while deploying fewer critical workloads on other clouds in support of their multicloud strategy

<https://www.oracle.com/customers/reale-group/>

Abu Dhabi Housing Authority boosts IT performance by 30% with Exadata on OCI, with their multicloud shift

<https://www.oracle.com/customers/abu-dhabi-housing-authority/>

Charles Taylor InsureTech improves agility and security with OCI, supporting their customers at lightning speed while keeping costs to a minimum

Let's build your data platform together removing complexity

Your roadmap starts here, now

Oracle Multicloud Workshop

Oracle's Multicloud Workshop brings your business and technology teams together with Oracle experts to design a strategy that unlocks the full value of your information—removing data silos and allowing universal and timely access to all your data while simplifying curation and data security.

Workshop benefits:

- **Expert-Led Collaboration:** Interactive session jointly led by Oracle's Black Belts, tailored to your business and technology context.
- **Current State and Business Needs Assessment:** Evaluate your existing data landscape, integration flows, governance, and analytics capabilities.
- **Modern Best Practices:** Explore proven reference architectures for unified, scalable, data platforms—applicable whether you operate on-premises, in the cloud, or in a hybrid environment.
- **Hands-on Engagement:** Participate in mapping exercises and co-design discussions, and solutioning to identify priorities and opportunities most relevant to your goals.
- **Actionable Recommendations:** Establish the foundation for modernization, governance, and data compliance, with a detailed roadmap provided in a follow-up phase after reviewing workshop findings.

ORACLE

Oracle Multicloud Workshop

Unlock the power of your data by making it available, accessible and secure throughout your enterprise

Modern business success depends on unified, secure, and actionable data. Oracle's Multicloud Modernisation Workshop brings your business and technology teams together with Oracle experts to design a strategy that unlocks the full value of your information—removing data silos and allowing universal and timely access to all of your data while simplifying curation and data security.

Business Value

The ability to run advanced analytics and enterprise AI depends on more than massive data—it requires trust, governance, and architecture. Data sprawl is the enemy of providing a consistent view of information, and the consolidation of data silos into a common data architecture allows it to be managed and consumed more simply and securely.

- Trusted at scale, Oracle seamlessly manages over 2 exabytes of customer data for 430,000+ organizations, including 90% of the Fortune 100.
- Unified and open, standards-based architecture that ensures interoperability, flexibility, and easy integration across cloud, on-premises, and hybrid environments.
- The Oracle Database natively supports Machine Learning, Blockchain, Graph, Spatial, JSON, REST, Events, Editions, and IoT Streaming as part of the core database and allows you to support many diverse projects using a single platform, significantly reducing complexity and management overhead while minimizing risk.
- Security, privacy, and regulatory compliance are built in, so your most valuable data is always protected.

Workshop Overview

This interactive workshop—designed for both business and technical stakeholders—offers a collaborative journey to modern data architecture. Together with Oracle experts, you will:

- Gain a comprehensive understanding of Oracle's Data Strategy and Data Architecture, exploring how to unify, govern, and leverage all your data assets.
- Discuss business requirements, key use cases, and organizational priorities to ensure solutions are aligned with strategic objectives.

Key steps of the engagement

- 1 hour kickoff to discuss scope and aims
- Data collection and discovery using Estate Explorer and documentation of other data repositories
- 4 hour workshop to discuss findings and map data flows and integration points
- 1 hour delivery of final report and recommendations

Customer audience

- Technology and Business Executives (CIO, CDO, CTO)
- IT/Data Architects, Data Engineers
- Analytics, and Data Science Leads
- Data Governance, Compliance, or Information Security Officers
- Business Stakeholders defining data, analytics or AI strategy

How it is delivered

Zoom or onsite

Pre-requisites

Ability to run Estate Explorer to collect information about the current Oracle Database estate, and access to individuals who can explain the data integration points and workflows

Delivered by

Oracle Account Cloud Engineers
Technology Black Belts
