

Oracle AI Database@AWS

Run your most critical workloads
where your business runs

Name

Presenter's Title

The IT reality in 2026

Cloud investment locked out

"We have a preferred hyperscaler but we haven't moved our Oracle database workloads there due to the limited availability, performance, and scale they offer."

On-premises limits and innovation gap

"Our competitors are already deploying AI that uses their operational data. We're being left behind."

Security risks

"With the rise of agentic AI, we're concerned that our private data won't be protected in the same way we do on-premises."

Operational burden and cost

"Data sprawl is out-of-control, IT costs are increasing everywhere, and we don't have the agility to respond quickly to market dynamics. We're under pressure to constantly reevaluate our IT and cloud strategy."

Moving your Oracle databases to the cloud

Your business runs in the cloud

Run Oracle where your business runs.
The same Oracle Database architecture on AWS.

AI happens where your data lives

Keep Oracle data on AWS and accelerate AI with minimal data movement.

The architecture you needed exists now

Migrate with confidence.
Proven Oracle performance, resilience, and near-zero downtime on AWS.

Oracle AI Database@AWS

AI-native platform collocated and natively integrated with AWS

Run Mission-Critical Workloads

Exadata Database Service
Autonomous Database
Oracle Database 19c/ 26ai

Migrate with Confidence

Zero Downtime Migration [ZDM]
Oracle Golden Gate
Native AWS Integration

Modernize with AI

AI Vector Search
Select AI
Native integration
with AWS AI services

Protect Enterprise Data

Real-Time Data Protection
Autonomous Recovery Service
Oracle Deep Data Security
Oracle Data Safe

Run apps and data together using AWS cloud-based services

Maximize the value of business data with AI

The AWS logo, consisting of the lowercase letters "aws" in a white sans-serif font, with a white curved arrow underneath the letters.

Sagemaker

Bedrock

Redshift

Quicksight

AWS Native Operations

Provisioning

AWS CloudFormation and Terraform
for infrastructure as code

**AWS Management Console, SDK,
and Command Line Interface**

Networking

Amazon VPC Lattice
for secure service networking

AWS Transit Gateway (TGW)
for extended connectivity

AWS Cloud WAN
for extended connectivity

Identity and Access

AWS Identity and Access Management (IAM)
for centralized access control

AWS Resource Access Manager (RAM)
for sharing resources between accounts

AWS Key Management Service (AWS KMS)
for centralized key management

Compute

Amazon EC2, Amazon EKS and Amazon ECS
for virtual servers and containers in the cloud

Backup and Analytics

Amazon Simple storage Service (S3)
for automated and user managed backups

Amazon Redshift for real-time replication
with Zero ETL integration

Monitoring

Amazon CloudWatch
for real time monitoring

Amazon EventBridge for event-driven applications

AWS CloudTrail for governance
and compliance

Reasons our customers are migrating **now**

Completing the cloud journey

Move Oracle to where the rest of your applications already run

Improving security and resilience

Cyber resilience, enterprise security, and automated recovery

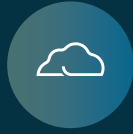

Simplify Operations and Reduce Cost

Unified operations, billing, support, and managed infrastructure

AI, analytics, and app modernization

Native integration with AWS AI and analytics services

Completing the cloud journey

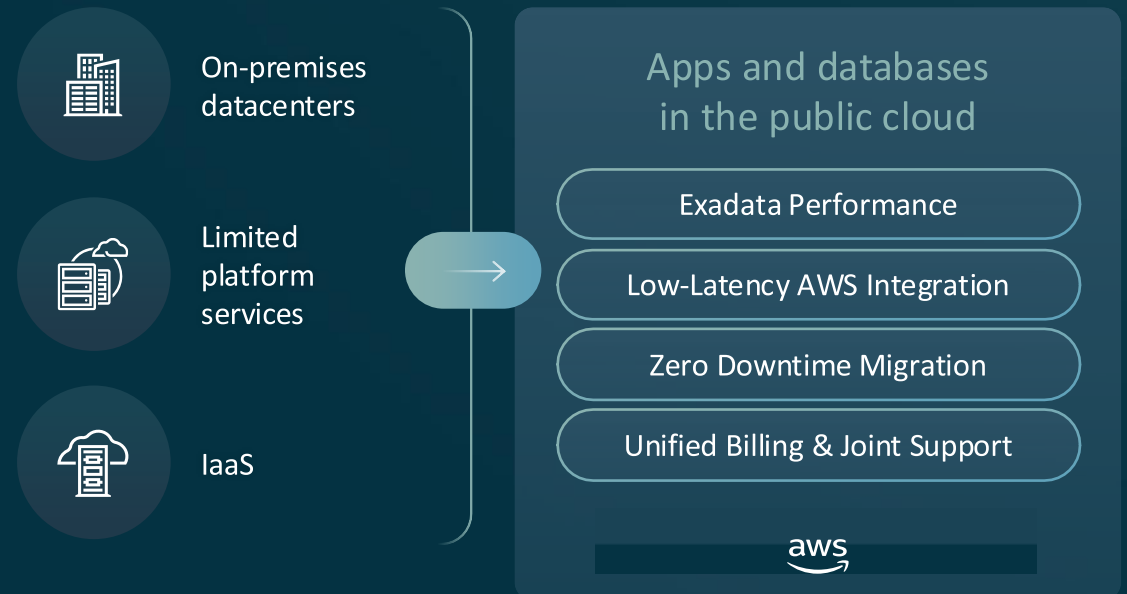

Challenge

How Oracle solves it

- ! You've moved many of your workloads to the cloud, but those using Oracle databases remain on-premises
- ! Performance, availability, scale, control, and migration complexity remain a concern when using IaaS

Bring your applications and Oracle databases to AWS and run them with native integrations and minimal changes

Supporting your migration

AWS and Oracle migration programs

- Oracle Migration Accelerator
- Oracle Lift Program
- AWS MAP

Use your AWS commitments towards
Oracle AI Database on AWS

Oracle Partner Network

Works with all major
global and region
systems integrators

Flexible Licensing & Consumption

- Bring Your Own License (BYOL) to protect and maximize your existing Oracle license investment
- Pay-as-you-go consumption for new workloads and projects

Challenge

- ! Falling behind on patches is a security risk
- ! Recovery isn't measured in days anymore, it's measured in lost business
- ! Ransomware is an existential threat

How Oracle solves it

Security

- Patches deployed faster, consistently, and with less drift. Fully managed with Autonomous AI Database
- Physical, network, identity security and key management security with AWS

Resilience

- Disaster recovery migration path with Active Data Guard and Zero Data Loss Recovery Service from on-premises to cloud – your cloud region becomes your DR site.

Rising IT costs and operational burden

Challenge

- ! Database sprawl increases operational complexity
- ! IT costs compound every quarter—hardware, footprint, talent, security, capex
- ! Data movement creates duplicate data and expensive ETL pipelines

How Oracle solves it

Consolidate

- Oracle AI Database supports multiple workloads and data types on one platform
- Reduce database sprawl and simplify operations

Optimize

- Managed Exadata infrastructure, Elastic scaling
- BYOL or Pay-as-You-Go

Eliminate Data Movement

- Zero-ETL integration with Amazon Redshift
- Analyze operational Oracle data without building ETL pipelines

Oracle
AI Database

Applications

Mission-critical
workloads

Analytics

BI, reporting,
real-time insights

AI

LLMs, AI/ML,
AI agents

Converged
enterprise
data platform

Relational

JSON

Graph

Spatial

Vector

AI

One platform for transactions, analytics, and AI

Consolidate

Reduce database
sprawl and
complexity

Cost-optimize

Lower TCO with
managed Exadata
and flexible
consumption
(BYOL/PAYG)

Simplify operations

Automated
management,
patching, backup,
and upgrades

Zero-ETL for Analytics

Seamless integration
with AWS analytics
without data
movement

Built-in security

Encryption, access control,
auditing, data redaction

AI built in

AI Vector Search, Select AI,
machine learning

Performance at scale

Exadata performance, elastic
scalability, high availability

Rising IT costs and operational burden

Migrated its financial services platform with 2 petabytes of data in Oracle Databases on-premises to Oracle Database@AWS, achieving 99.99% availability with RAC, faster data processing and query responses, and 15% lower TCO to redirect toward AI innovation with Amazon Bedrock

Challenge

- ! Building modern applications requires access to trusted enterprise data
- ! Analytics is slowed by complex ETL pipelines and duplicated data
- ! AI initiatives struggle to securely access live operational data

How Oracle solves it

Build Cloud-native Applications

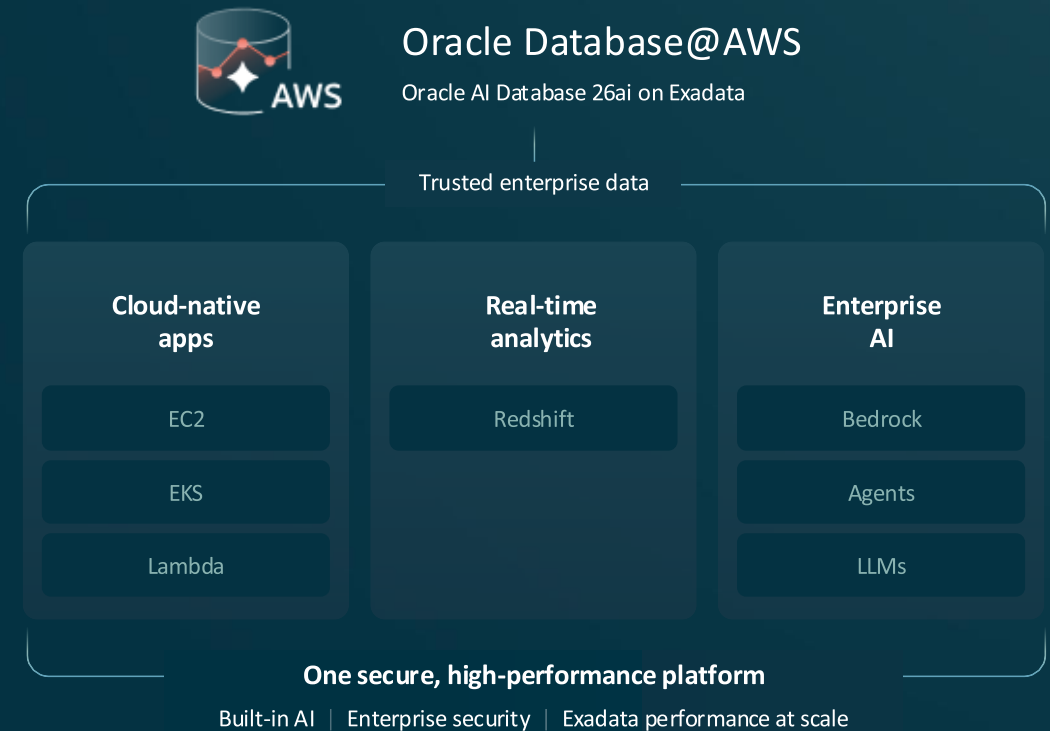

- Oracle Database as the system of record for AWS applications
- Low-latency connectivity with AWS compute and services

Accelerate Analytics

- Faster insights with fewer data copies and pipelines
- Zero-ETL integration with Amazon Redshift

Enable Enterprise AI

- Oracle Database 26ai + Exadata provide enterprise AI, performance, and security
- Native integration with Amazon Bedrock and SageMaker AI
- Ground AI on trusted Oracle enterprise data and Security

Customers across industries

Oracle AI Database@AWS: Key Takeaways

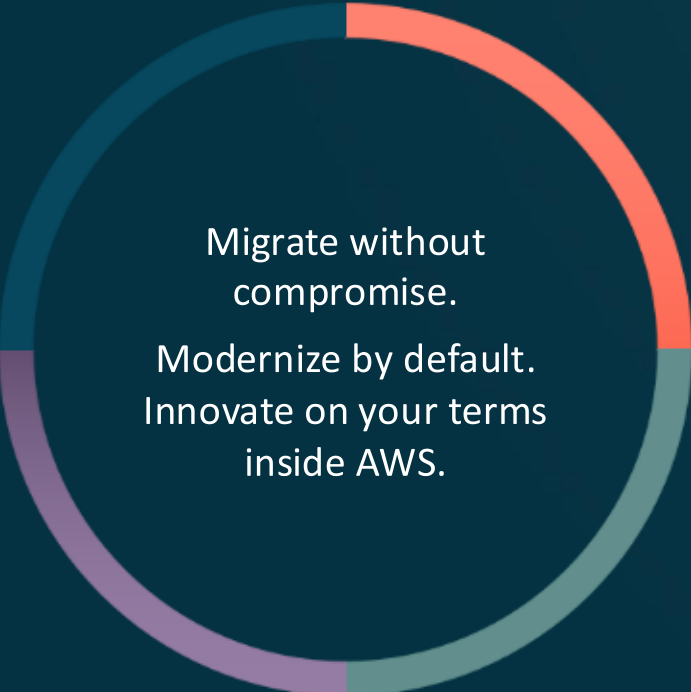

Run Oracle AI Database inside AWS as one experience, unlocking innovation

Run without compromise

- Exadata performance and Oracle compatibility
- Oracle RAC and Maximum Availability Architecture
- Native deployment inside AWS with low-latency connectivity

Migrate with Confidence

- Zero downtime migration for mission-critical workloads
- Enterprise-grade resilience and cyber recovery
- Flexible licensing (BYOL or Pay-as-You-Go)

Migrate without compromise.
Modernize by default.
Innovate on your terms inside AWS.

Innovate with AI and Analytics

- Cloud-native applications on AWS
- Zero-ETL analytics with Amazon Redshift
- Enterprise AI with Oracle Database 26ai and Amazon Bedrock

Simplify and Optimize

- Consolidated Oracle AI Database platform
- Elastic scaling and managed operations
- Unified billing and coordinated Oracle + AWS support

Next steps

Let's schedule a workshop to discuss your projects
