

Building a Complete Exadata FinOps Model

A practical methodology for Exadata cost/chargeback

Operations Advisory Team

Office of CTO | EMEA Solution Engineering

July, 2026

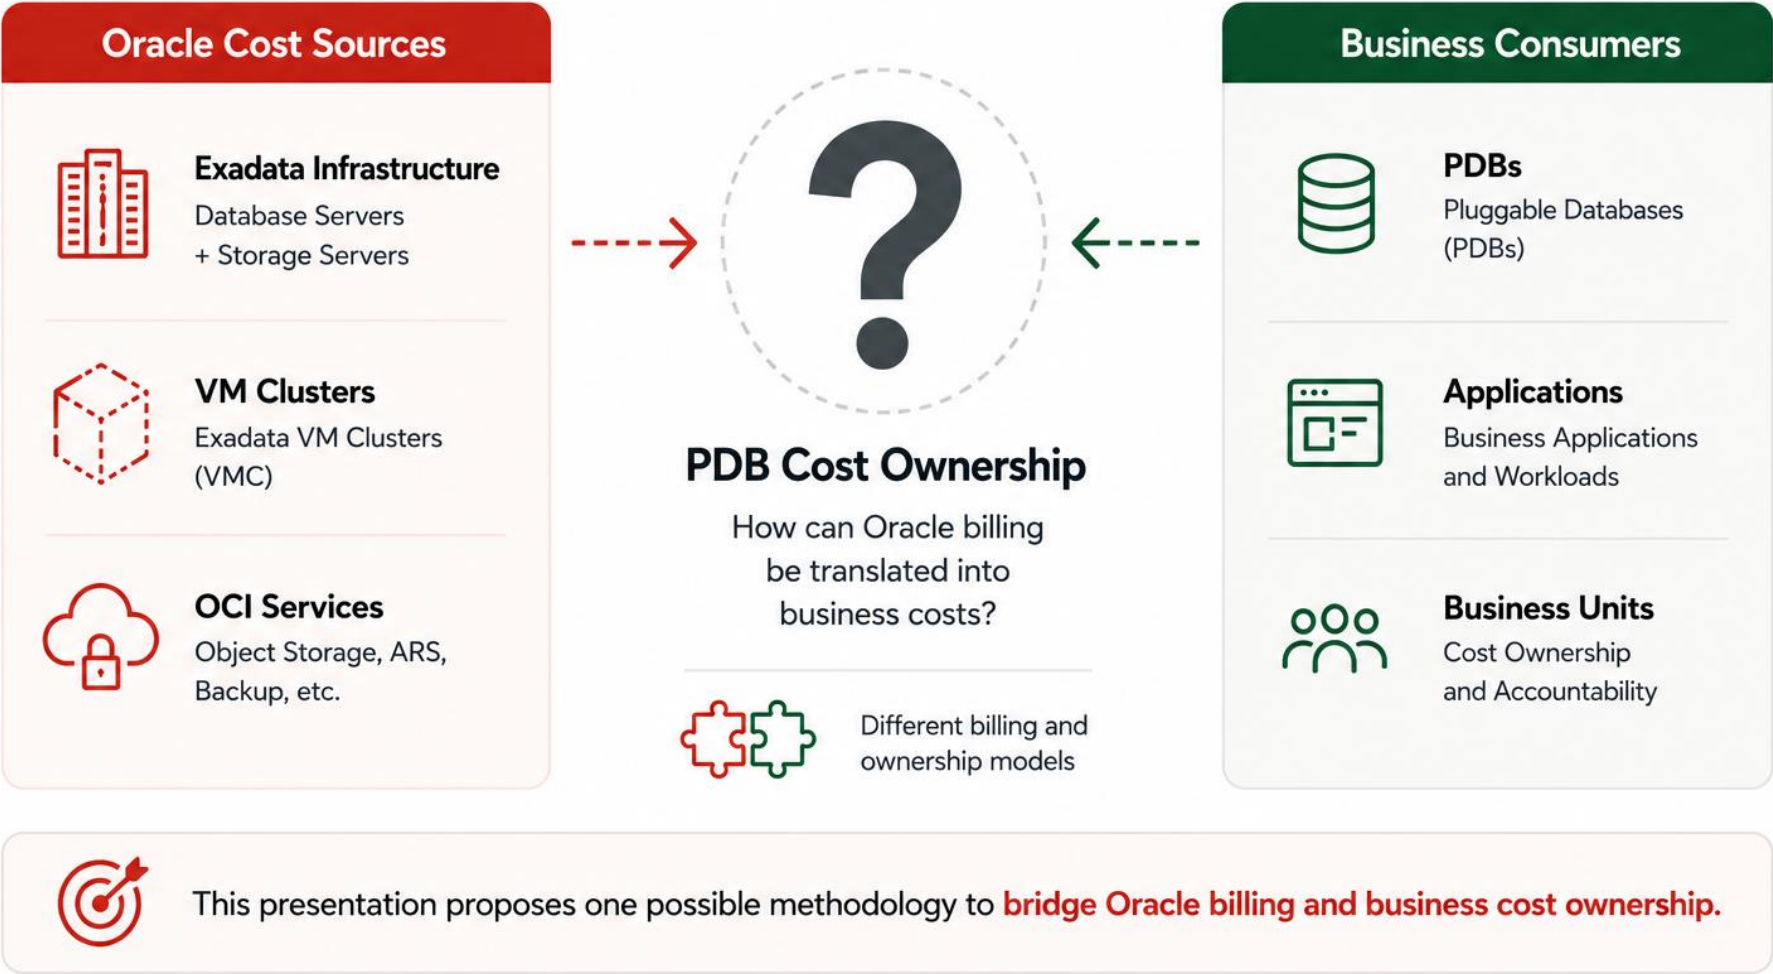

Agenda

- 01 The Challenge
- 02 Oracle Native Capabilities
- 03 Customer Cost Allocation
- 04 Building the Complete PDB Cost
- 05 Conclusions

The Challenge

Bridging Oracle Billing and Business Cost Ownership

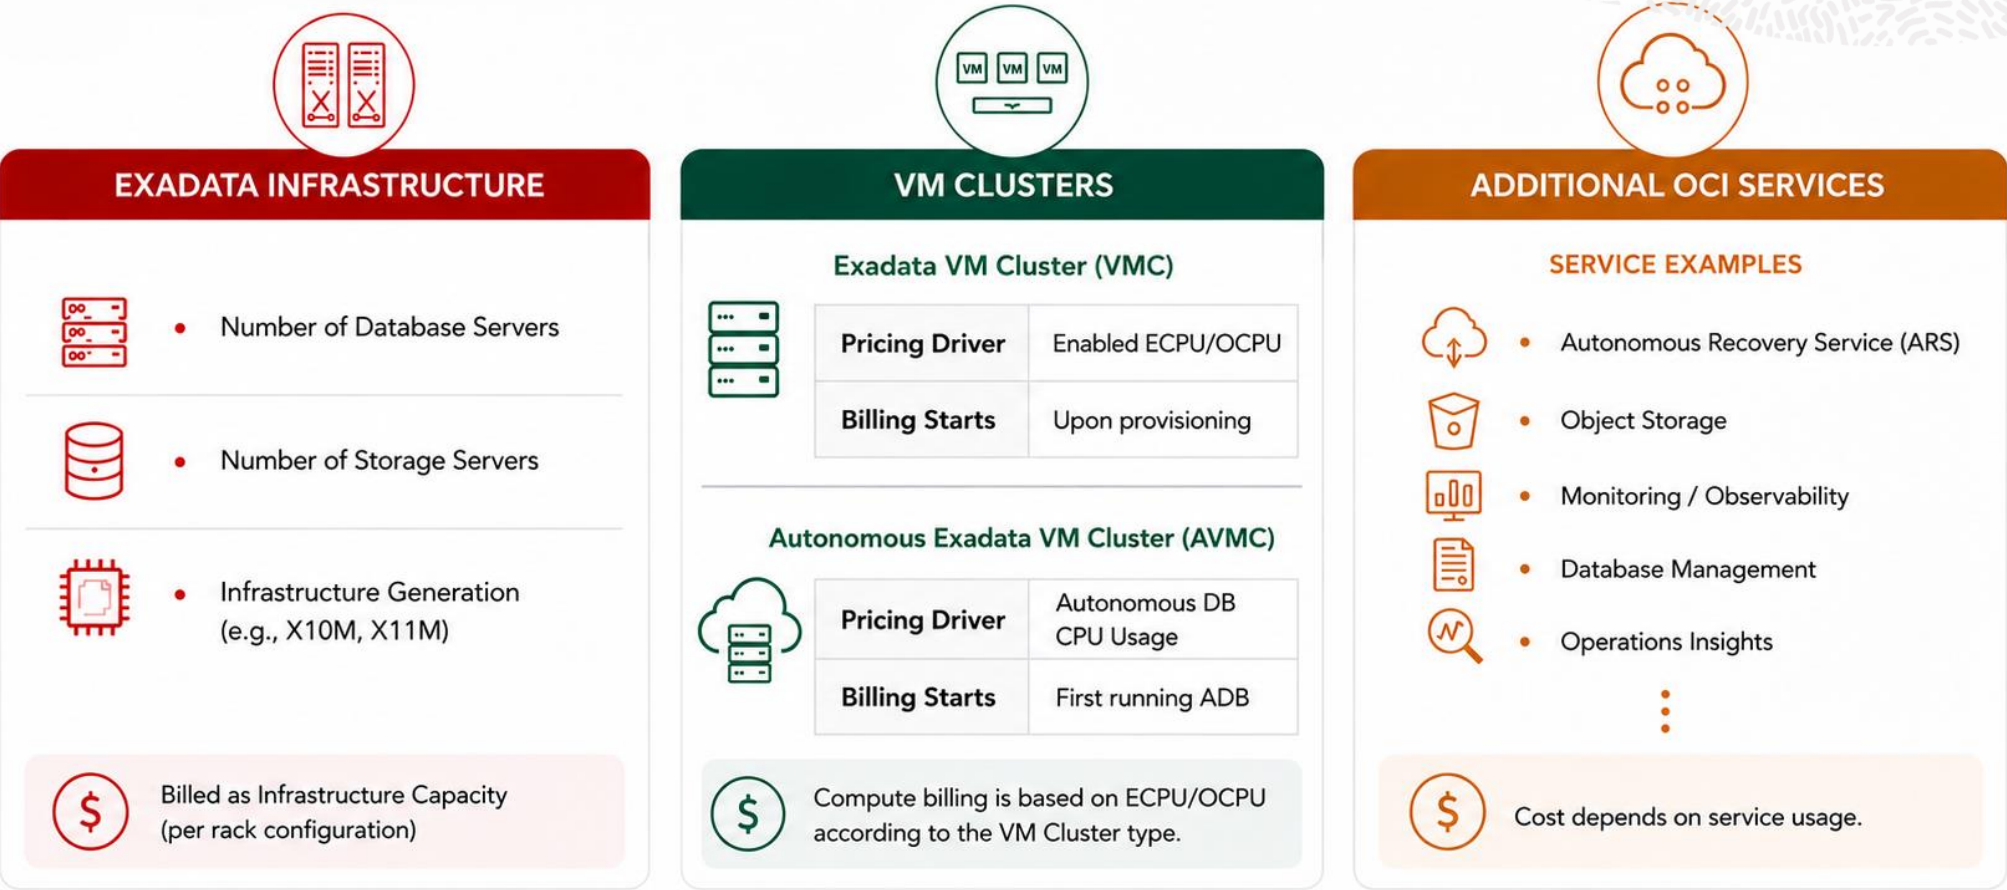

How much does a PDB really cost?

Oracle Native Capabilities

OCI Exadata Billing Model

Billing Entities and Pricing Drivers

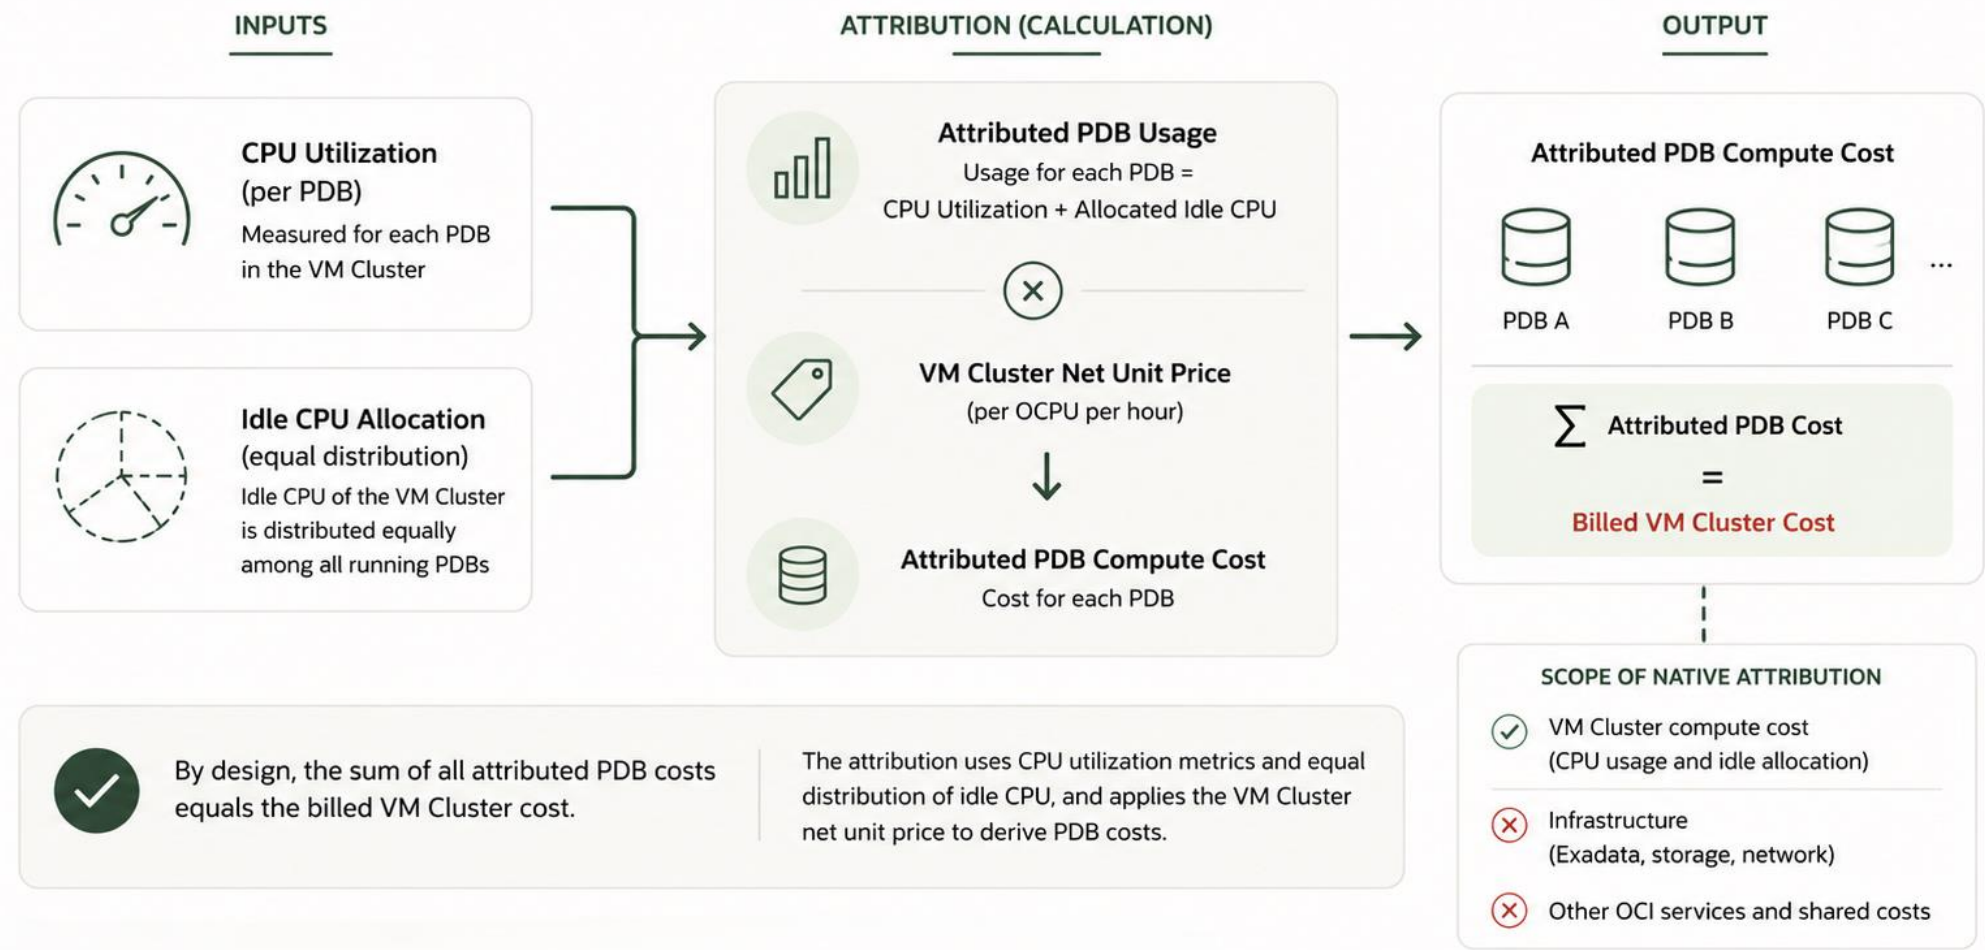

Applies to Exadata Database Service (ExaDB-D) and Exadata Cloud@Customer (ExaDB-C@C). Not applicable to ExaDB-XS.

Native PDB Cost Attribution

Available in OCI Cost Analysis and Cost Reports

Customer Cost Allocation

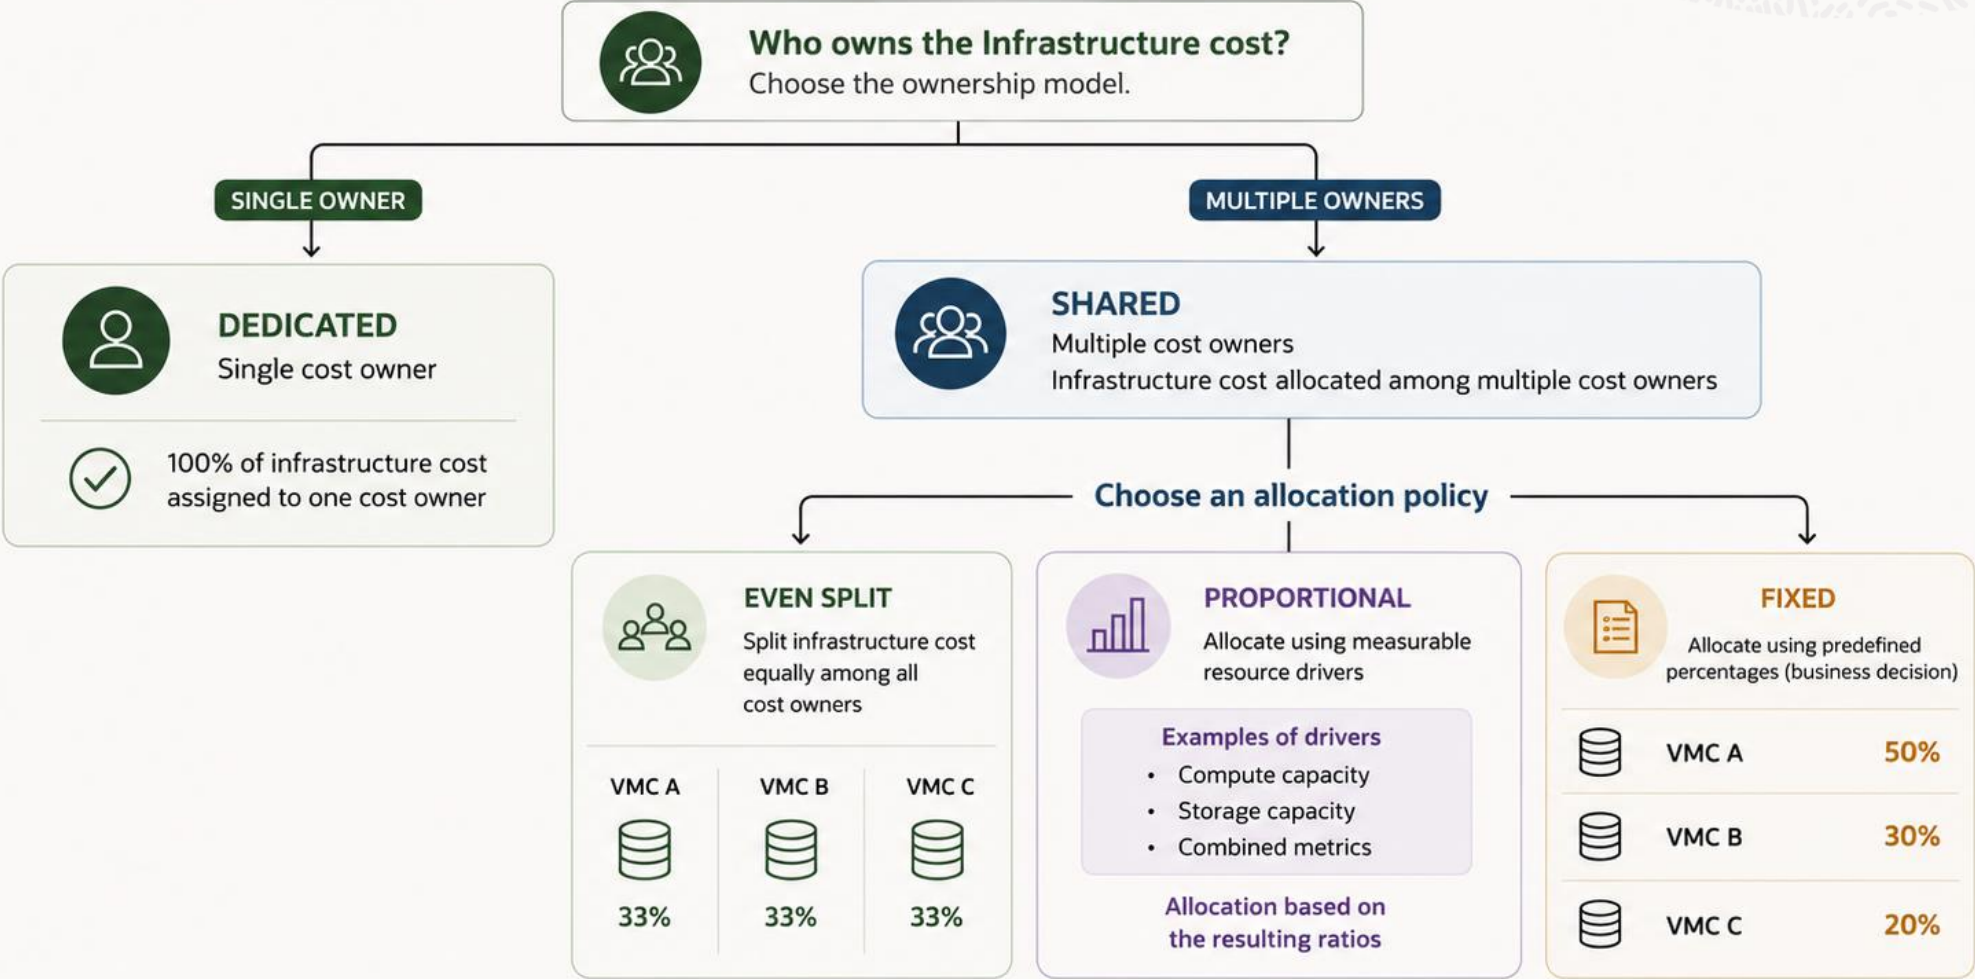

The Missing Decision

The decision of how to allocate the shared infrastructure costs is up to you

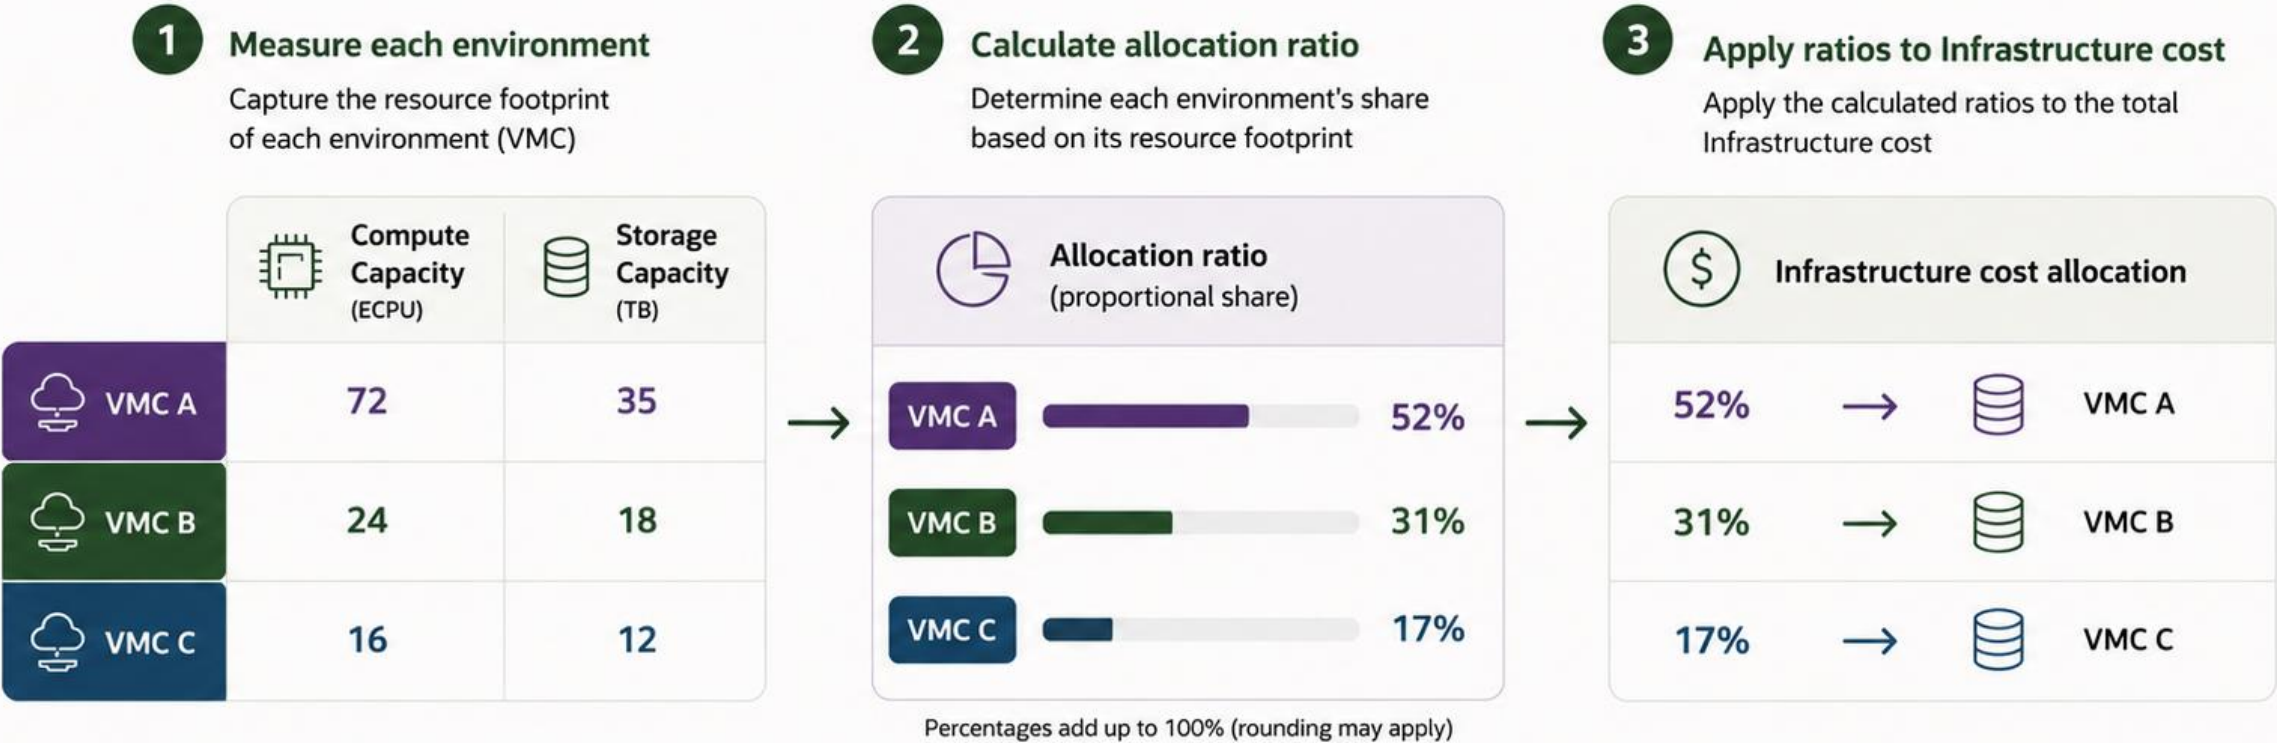

Infrastructure Cost Allocation Model

Oracle defines billing. The customer defines allocation.

Example: Proportional Infrastructure Allocation

An example approach using resource drivers (Compute & Storage Capacity)

3

Apply ratios to Infrastructure cost

Apply the calculated ratios to the total Infrastructure cost

Infrastructure cost allocation

52%

→

VMC A

31%

→

VMC B

17%

→

VMC C

What's next?

The allocated Infrastructure cost per VMC is then combined with Native PDB Cost Attribution (provided by Oracle) to calculate the Total PDB Cost.

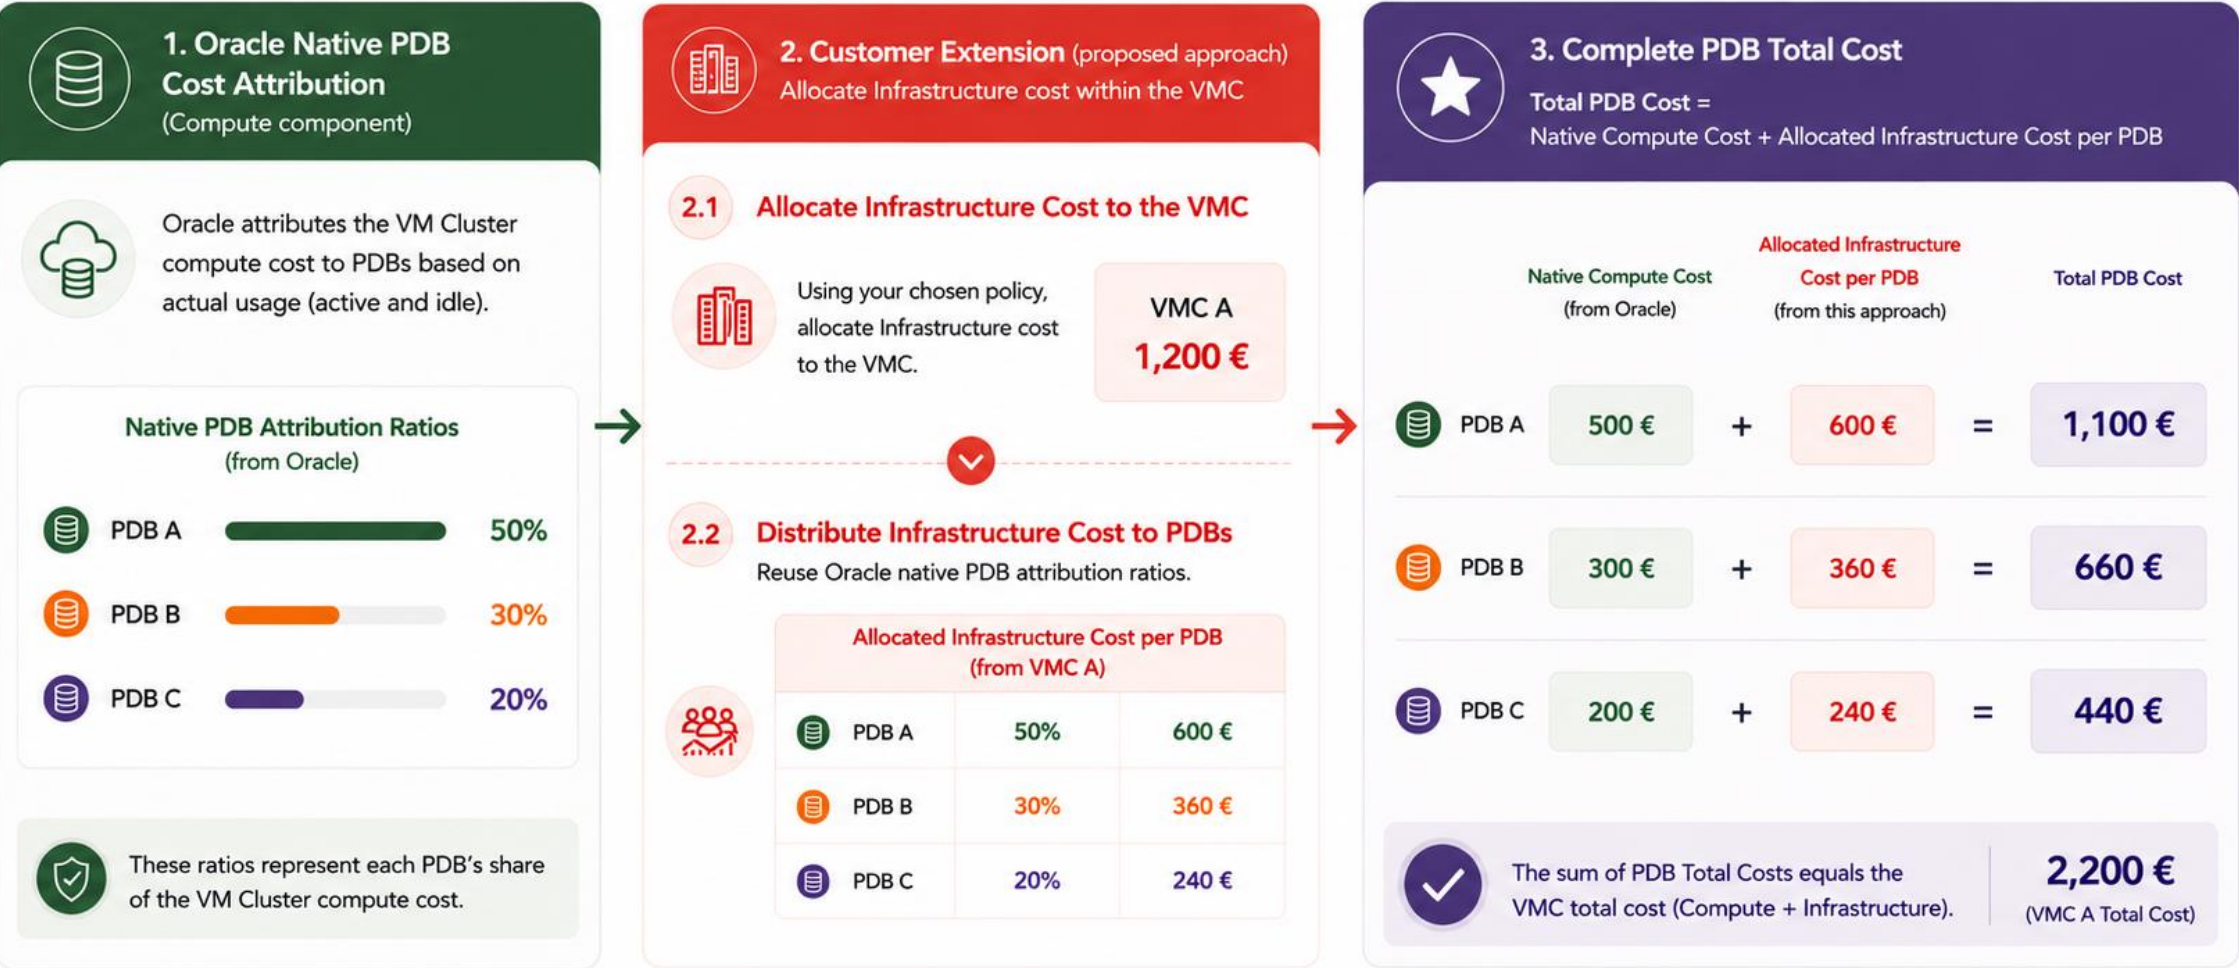

Building the Complete PDB Cost

Completing the PDB Total Cost

Extend Oracle's Native PDB Cost Attribution with allocated Infrastructure cost

PROPOSED APPROACH

Conclusions

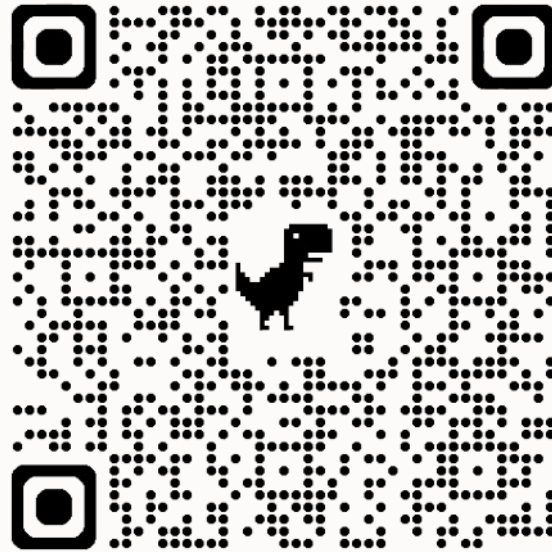

Take aways

Oracle provides the native foundation.

Customer-defined allocation completes the PDB Total Cost of Ownership.

- ✓ Oracle provides the billing and native compute attribution foundation.
- ✓ Shared infrastructure costs require a customer-defined allocation policy.
- ✓ Reusing Oracle native attribution ratios provides a consistent extension to infrastructure allocation.
- ✓ The result is a complete, transparent and explainable PDB Total Cost of Ownership.

Stay tuned
